### "Dissemination Education for Knowledge, Science and Culture" -Shikshanmaharshi Dr. Bapuji Salunkhe

Shri Swami Vivekanand Shikshan Sanstha's

# Vivekanand College, Kolhapur (Autonomous) Department of Physics Syllabus Completion Report

Academic Year: 2022-23

Subject: Physics

Name of the teacher: Dr.M.M. Karanjkar

Month Ju	ine			Module/Unit:	Syllabus Covered / Not Covered	Remark
Course	Lect ures	Practicals	Total	Introduction to Quantum Mechanics	Covered	
B.Sc.	12		12	Origin of quantum mechanics, Review of black body radiation, Photoelectric effect, matter waves, De-Broiglie hypothesis, experimental evidence of de Broglie theory (Davisson and Germer experiment), wave particle duality, Heisenberg's uncertainty principle and different forms uncertainty principle		
B.Sc. 1	16		16	Oscillations  Simple harmonic motion (SHM), Differential equation of SHM and its solutions, Kinetic and Potential Energy, Total Energy and their time averages, Damped oscillations, Forced oscillations.	Covered	

B.Sc. II	<b>.</b>	64	64	Practicals:	Covered
				1) Characteristics of Transistor.	
				2) Use of sextant to measure height of object.	
				3) Crystal Oscillator.	
				4) Colpitts oscillator.	2
Month J	uly			Module/Unit:	Covered
Course	Lect	Practicals	Total	Introduction to Quantum Mechanics	
B.Sc.	12	-	12	Origin of quantum mechanics, Review of black body radiation, Photoelectric effect, matter waves, De-Broiglie hypothesis, experimental evidence of de Broglie theory (Davisson and Germer experiment), wave particle duality, Heisenberg's uncertainty principle and different forms uncertainty principle	
B.Sc. I	16	-	16	Elasticity  Bending of beam, Bending moment, Cantilever (without considering weight of cantilever), Beamsupported at both the ends (without considering weight of beam). Torsional oscillation, Work done in twisting a wire, Twisting couple on a cylinder, Torsional pendulum - Determination of Rigidity modulus and moment of inertia, Determination of Y, η and σ by Searles method	Covered

STD. JUNE

1 ) To record and analyze the cooling temperature of hot object as a function of time using a thermocouple.  2) To calibrate Resistance Temperature Device (RTD) using Null Method/Off-Balance Bridge  3) Temperature of flame.  4) To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow method.  Month August  Module/Unit:  Course Lect ures  B.S.c. 12 - 12  Applications of Schrodinger's Steady State Equation  Quantum mechanics treatment of particle in rigid box (1D and 3D). Step potential relation and	B.Sc.	100	64	64	Dwo et 1

Course	Lect	Practicals	Total	Nucleus ( Nuclear Structure & General Properties of	Covered	
3.Sc. II	12		12	Introduction, Constituents of nuclei, Nuclear size, Nuclear magnetic moment, Electric quadrupole moment, Nuclear spin, Unit of atomic mass (amu), Mass defect, Packing fraction, Packing fraction curve, Binding energy, B.E. curve, Nuclear forces, Liquid drop model, Semiempirical B.E. formula, Magic numbers Introduction of elementar particles.		
B.Sc. III	12		12	Need of accelerators, Types of accelerators ( Qualitative orbital accelerators, Cyclotron, (Principle, construction, working, theory, merits, demerits ) . Limitation of cyclotron, Synchrocyclotron, ( construction, working, theory, theory, working, theory, merits) . Betatron, ( principle, construction, working, mathematical theory, merits) . Accelerators in India.	ory	

B.Sc. III	2	80	80	Practicals:	Covered
				1) Resonance pendulum.	
				2) S. T. of soap solution.	
				3) S. T. by Fergusson modified method.	
				4) Y & η using flat spiral spring.	
Month July	y			Module/Unit:	Covered
Course	Lect	Practicals	Total	Superposition of Harmonic Oscillations	
B.Sc. II	12		12	Superposition of two perpendicular harmonic oscillations- for oscillations having	
				equal frequencies (Graphical and analytical methods) and oscillations having different	
				frequencies (Lissajous figures), Uses of Lissajous figures.	
B.Sc. III	12	+	12	Superposition of Harmonic Oscillations	Covered
				Linearity and superposition principle, Composition of two simple harmonic motions,	
				Superposition of two collinear harmonic oscillations- for oscillations having equal frequencies	
				(Analytical and geometrical methods) and oscillations having different frequencies	
				(Beats)	

B.Sc. III	-	80	80	Practicals:	Covered	II.
				1) 'Y' by Koenig's method.		
				2) 'Y' by cornu's method.		
	•			3) Measurement of heat capacity of solid.		
				4) S. T. tension by drop weight method.		
				5) Young's modulus by		
				vibration using AFG.		
Month Aug				Module/Unit:	Covered	
Course	Lect ures	Practicals	Total	Coupled Oscillations:		
S.Sc. II	12	-	12	Normal modes of vibration, normal coordinates, degrees		
				of freedom, types of coupling,		
				frequency of oscillatory		
				systems, Energy transfer in coupled oscillatory system.		

Sc. III	12	=	12	Nuclear Radiation Detectors	Covered
				Introduction : Ionization chamber, G. M. counter, ( principle, construction, working mechanism, limitations, merits ) Scintillation Counter ( principle, construction, working, advantages ) Introduction to cosmic radiations, Wilson cloud chamber, Bubble chamber.	
B.Sc. III		80	80	Practicals:  1) Cardinal points by turn table method.  2) Cardinal points by Newton's method.  3) Diffraction at single slit.  4) Diffraction at cylindrical obstacle.  5) Diffraction at straight edge	Covered
Month S B.Sc. II	eptemb Lec ure	ct Practical	s Total	Module/Unit:  Waves Motionand Ultrasonic waves  Waves Motion: Transverse waves on a string, travelling	Covered

12	and standing waves on a string,  Normal modes of a string, Group velocity and Phase velocity, Plane waves, Spherical waves.  Ultrasonic waves: Piezo-electric effect, Production of ultrasonic waves by Piezo-	f
	generator, Detection of ultrasonic waves, Properties ultrasonic waves, Applications of	
B.Sc. III 12 -	ultrasonic waves.  12 Radioactive Decay	
B.Sc. III - 80	Natural radioactivity, Artificial radioactivity, Study of alpha decay by magnetic spectrograph, Velocity of alpha particles, Range of α- particles, α- disintegration energy, fine structure of αrays. Beta decay, Study by β - ray spectrometer, continuous nature, neutrino hypothesis, Gamma Decay, origin & gamma rays, γ- ray spectrum, internal conversion, Isomerism.	Covered
	Practicals:  1) Lloyd's single mirror.  2) Double refracting prism	Covered
	3) Diameter of lycopodium powder.	
	4) Spherical aberration. 5) Absorption of spectrum of KMno4 solution.	

ober/No	vember		Module/Unit:

CO

B.Sc. III	-	80	80	Practicals:	Covered	
				1) e/m of electron by		
				Thomson's method.		1
				2) Measurement of dielectric constant.		
				3) Resistivity of		1
				semiconductor crystal with		
				temperature by four probe method.		
				5) Calibration of wire using		
Month Jan	II O PO :			Carey-foster key		
	uary			Module/Unit:	Covered	
Course	Lect ures	Practicals	Total	Resolving Power of optical instruments	- 5 · 6 · 6 · 6 · 6 · 6 · 6 · 6 · 6 · 6 ·	
3.Sc. II	12		12			
				Resolution, Resolving power of optical instruments,		
				Rayleigh's criterion for the limit of		
				resolution, Modified		
				Rayleigh's criterion.		
1				comparison between		
				magnification and resolution,		
				resolving power of plane		
				diffraction grating, resolving power of a prism.		
			1			

B.Sc. III	12	•	12	Molecular Physics	Covered
				Molecular system, type of bonds, diatomic molecule as a rigid rotator rotational states of diatomic molecule, Raman effect, Experimental study of Raman effect, classical theory of Raman effect, Applications of Raman effect	
B.Sc. III	3.	80	80	Practicals:	Covered
				1) Self inductance by Owen's bridge.	
				2) Self inductance by Rayleigh's method.	
				3) Self inductance by Maxwell bridge.	
				4) Measurement of BV, BH and $\theta$ using earth inductor.	
				5) Hysteresis by	
				magnetometer.	
Month Feb	ruary			Module/Unit:	Covered
Course	Lect	Practicals	Total	Polarization of light	

B.Sc. II	12	<b>S</b>	12	Revision of plane of vibration, plane polarization, perpendicular vibration, parallel vibrations,		
				polarization by reflection and refraction, Idea of polarization, polarization by double	>	
				refraction, Huygens explanation of double refraction through uniaxial crystals, Nicol		
				prism(construction, working), production and detection of circularly and elliptically polarized		
				light, optical rotation - laws of rotation of plane of polarization, polarimeter.		
B.Sc. III	12		12	Principle of Superposition ,Coherence and condition for interference, Division of amplitude	Covered	
				and division of wave front, Division of wave front – Lloyds single mirror(determination of		
				wavelength of light of monochromatic source),Division of amplitude- Interference in thin		
				parallel films (reflected light only), Wedge shaped films, Newton's rings and its application		
				for determination of wavelength and refractive index of light.		

S.Sc. III	-	80	80	Practicals:	Covered	
3.5c. m				1) Study of divergence of LASER beam.		
				Measurement of     wavelength of LASER using     grating.		
				3) Lattice constant using XRD powder.		
				4) To measure numerical aperture of optical fibre.		
				5) Obtain interference fringes using Biprism.		
Month Ma	arch			Module/Unit:	Covered	
Course	Lect		Total	Laser Physics Ordinary Light, Laser,		
B.Sc. II	12		12	Spontaneous and stimulated emission, Populations Inversion, Monochromaticity directionality, Pumping optical, electrical) Ruby lase He-Ne laser, Diode laser Laser applications, (Industria medical, nuclear, optical) Types of lasers	s ', ( ( r, ,	

			Space Science	Covered
			Cosmology, Big-bang theory, oscillating theory, steady-state theory, Hubble's law, cosmological tests, Milky way galaxy, our solar system, features of sun, interior of sunspots, static characteristics of earth and mars.	
	80	80	Practicals:  1) UJT as voltage sweep generator.  2) Astable multivibrator by using IC 555 timer.  3) Monostable multivibrator by using IC 555 timer.  4) IV characteristics of P-N diode and LED.  5) Inverting amplifier using op - Amp 741.	Covered
			T ATA	Sub-units

B.Sc. II	12		12	Thick lens, combination of lenses (system)Cardinal points of an optical system (definitions only), graphical construction of image using cardinal points, Newton's formula, relation between f and f ' for any optical system, relation between lateral, axial and angular magnifications.	
B.Sc. III	12			Atomic Physics  Quantum numbers , spatial quantization, vector atom model, Alkali Spectra, Optical spectral series, Spectral term spectral notation, energy level diagram of sodium, spin orbit interaction Zeeman effect, Explanation of Anomalous Zeeman effect on vector atom model, Anomalous Splitting of D1 and D2 Line	Covered

B.Sc. III	27	80	80	Practicals:	Covered
				1) e/m of electron by Thomson's method.	
				2) Measurement of dielectric constant.	
				3) Resistivity of semiconductor crystal with temperature by four probe method.	
				5) Calibration of wire using Carey-foster key	
Month Janu	iary			Module/Unit:	Covered
Course	Lect ures	Practicals	Total	Resolving Power of optical instruments	
B.Sc. II	12	2	12	Resolution, Resolving power of optical instruments, Rayleigh's criterion for the limit of	
				resolution, Modified Rayleigh's criterion, comparison between magnification and resolution,	
				resolving power of plane diffraction grating, resolving power of a prism.	

			id.	Molecular system, type of bonds, diatomic molecule as a rigid rotator rotational states of diatomic molecule, Raman effect, Experimental study of Raman effect, classical theory of Raman effect, Applications of Raman effect	
B.Sc. III		80	80	<ol> <li>Practicals:</li> <li>Self inductance by Owen's bridge.</li> <li>Self inductance by Rayleigh's method.</li> <li>Self inductance by Maxwell bridge.</li> <li>Measurement of BV, BH and θ using earth inductor.</li> <li>Hysteresis by magnetometer.</li> </ol>	Covered
Month Febru	lary Lect	Practicals	Total	Module/Unit:  Polarization of light	Covered

B.Sc. II 12	- 12	Revision of plane of vibration , plane polarization, perpendicular vibration , parallel vibrations,  polarization by reflection and refraction, Idea of polarization, polarization by	
		double refraction, Huygens explanation of double refraction through uniaxial crystals, Nicol  prism(construction, working), production and detection of circularly and elliptically polarized  light, optical rotation - laws of rotation of plane of	
B.Sc. III	12 - 12	Principle of Superposition ,Coherence and condition for interference, Division of amplitude  and division of wave front, Division of wave front — Lloyds single mirror(determination of wavelength of light of monochromatic source),Division of amplitude- Interference in thin parallel films (reflected light only), Wedge shaped films, Newton's rings and its application for determination of wavelength and refractive index of light.	

			80	Practicals:	Covered	V
S.Sc. III	80	)	80	1) Study of divergence of		
		1		LASER beam.		1
				2) Measurement of wavelength of LASER using grating.  3) Lattice constant using XRD		
				powder.	1	
				4) To measure numerical aperture of optical fibre.		
				5) Obtain interference fringe using Biprism.	Covered	
1 1/10	oh.			Module/Unit:	Covers	A .

Academic Year: 2022-23

Subject: Physics

Name of the teacher: Dr. G. J. Navathe

Month J	Month June			Module/Unit:	Syllabus covered/Not covered	Remarks
B.Sc. III	Lect ures	Practicals	Total	Physical interpretation of wave function, Schrodinger's time dependent and independent equation (one and three dimensional) Requirements of wave function, Eigen value, Eigen function, Normalized orthogonal and orthonormal wave functions, Probability current density (Continuity equation). Examples on Normalization of wave function	Covered	
B.Sc. I	16		16	Oscillations  Simple harmonic motion (SHM), Differential equation of SHM and its solutions, Kinetic and Potential Energy, Total Energy and their time averages, Damped oscillations, Forced oscillations.	Covered	

B.Sc. II	-	64	64	Practicals:	Covered	
	ž.			1) To record and analyze the cooling temperature of hot object as a function of time using a thermocouple.		
				2) To calibrate Resistance Temperature Device (RTD) using Null Method/Off- Balance Bridge		
				3) Temperature of flame.		
				4) To determine Mechanical Equivalent of Heat, J, by Callender and Barne's constant flow		
				method.		
Month J	uly	,	,	Module/Unit:	Covered	
Course	Lect	Practicals	Total	Introduction to Quantum Mechanics		
B.Sc.	12		12	Origin of quantum mechanics, Review of black body radiation, Photoelectric effect, matter waves, De-Broiglie hypothesis, experimental evidence of de Broglie theory (Davisson and Germer experiment), wave particle duality, Heisenberg's uncertainty principle and different forms uncertainty principle		
B.Sc.	16		16	Gravitation:  Newton's Law of Gravitation, Motion of a particle in a central force field (motion in a plane, angular momentum is conserved, areal velocity is	Covered	
				constant), Kepler's Laws (statement only), Satellite in circular orbit and applications, Geosynchronous		

				orbits, Weightlessness, Basic idea of global positioning system (GPS) and its		
B.Sc.		64	64	Practicals:  1) Characteristics of Transistor.  2) Use of sextant to measure height of object.  3) Crystal Oscillator.  4) Colpitts oscillator.	Covered	
Month A	August			Module/Unit:	Covered	
Course	Lect	Practicals	Total	Operator in Quantum Mechanics		
B.Sc. III	12	≅	12	Definition of an operator in quantum mechanics, commutation relation in quantum mechanics, position, momentum and angular momentum operator, Angular momentum operator in spherical polar coordinate system, Hamilton operator, Hamilton operator commutation relation between x' and p. Expectation value of an operator communication relation between L2 and components of L, Raising and lowering operator L+ and L Eigen values of L2 and L1. Concept of parity operator.		

B.Sc. II - 64 64	1) To determine wavelength of 1) Sodium &2)spectrum of Mercury light usingplane diffraction grating.  2). Goniometer I-To study cardinal points of
e cor	Mercury light usingplane diffraction grating.  2). Goniometer I. To at a light solution of the
COLLEGE	

				4) To study angle of specific rotation of sugar using Polarimeter.		
Month S	Septembe	er		Module/Unit:	Covered	
B.Sc. III	Lect	Practicals	Total	Applications of Schrodinger's Steady State Equation  Quantum mechanics treatment of particle in rigid box (1D and 3D). Step		
	12		12	potential relation and transmission coefficient. Barrier potential- Tunnelling effect, α-decay, simple harmonic oscillator.	( M.)	3

Sc. I	16		16	Surface Tension	Covered	
Sc. 1				Surface Tension, Angle of contact and wettability, relation between surface tension, excess of pressure and radius of curvature, Experimental determination of surface tension by Jaeger's method, Factors affecting surface tension, Applications of surface tension.		
B.Sc. II		64	64	Practicals:  1) Measurement of rise, fall and delay time using a CRO	Covered	7
				2) Measurement of distortion of a RF signal generator using distortion factor meter.		
				3) . Measurement of R, L and C using a LCR bridge/ universal bridge.		
				4) Measurement of time period, frequency, average period using using universal counter/frequency counter

onth Janu			Module/Unit:	Covered	
ond, v	,		<ul><li>2) Electronic switch using transistor.</li><li>3) Characteristics of FET.</li><li>4) FET as VVR.</li></ul>		
3.Sc. II	64	64	Practicals:  1) Ic 555 timer.	Covered	
B.Sc. I	16 -	16	Electricity  Introduction — DC varying currents, LR Circ RC circuit and LC circ Growth and decay of currer Theory of B.G. and constat of B.G., time constants T	uit, uit,	
III	12 _		theory (Classical Quantum mechanica	and I) , nodel, ectron, ectors, and type tivity	

B.Sc. III	12	12	Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility. Polarizability. Clausius Mosotti Equation. Classical Theory of Electric Polarizability. Normal and Anomalous Dispersion. Cauchy and Sellmeir relations. Langevin-Debye equation. Complex Dielectric Constant. Optical Phenomena. Application: Plasma Oscillations, Plasma Frequency, Plasmons.		
B.Sc. I	16	16	A.C. Circuits  Complex numbers and their application in solving a. c. series LCR circuit, complex impedance, Reactance, Admittance, and Susceptance, Resonance in LCR series circuit, Sharpness of resonance (qualitative treatment only), Q-factor (definition only) A.C. Bridge - Owen's Bridge	Covered	

B.Sc. II	-	64	64	Practicals:	Covered
				1) To determine the wavelength of sodium light using Fresenel Biprism.	
				2) To determine the Resolving Power of a Prism.	
				3) To determine the Resolving Power of a Plane Diffraction Grating.	
				4) To determine wavelength of Laser light using diffraction of single slit.	
Month F	ebruary			Module/Unit:	Covered
Course	Lect	Practicals	Total	X-Ray Diffraction	
B.Sc. III	12	-	12	Reciprocal lattice and its properties, concept of Brillouin zone, diffraction of X-rays by crystals, Ewald construction, Bragg's law in reciprocal lattice, X-ray diffraction methods: 1) Laue method. 2) Rotating crystal 3) Powder method - Principle, Construction, Working, analysis of cubic crystal by powder crystal method	
B.Sc. I	16		16	Magnetism  Introduction to magnetization and intensity of Magnetization, Biot-Savart's law & its applications - straight conductor, circular coil, solenoid carrying current, Divergence and curl of magnetic field, Magnetic vector potential, Ampere's circuital lawat earth's surface	Covered

B.Sc. II	-	64	64	Practicals:	Covered	
				1) To determine the value of Stefan's Constant.		
				2) To determine the coefficient of thermal conductivity of copper by Searle's Apparatus.		
				3) To determine the Coefficient of Thermal Conductivity of Cu by Angstrom's Method.		
				4) To determine the coefficient of thermal conductivity of a bad conductor by Lee and Charlton's disc method		
Ionth Ma	arch			Module /II :	Covered	
110	Lect ures	Practicals	Total	Magnetic Materials and their Properties:	covered	
Sc.	12	-	12	Magnetic intensity, magnetic induction, permeability, magnetic susceptibility. Hysteresis and hysteresis curve, diamagnetic, paramagnetic, ferromagnetic, ferrimagnetic and antiferromagnetic materials.		

B.Sc. I	16	¥	16	Network Theorems	Covered
		920		Introduction, Node, Junction, Branch, Loop, Active and passive elements, Thevenin's theorem, Nortan's theorem and equivalence between them, problems.	
B.Sc. II	70	64	64	Practicals :	Covered
				1)To observe the loading effect of a multimeter while measuring voltage across a low resistance and high resistance.	
				2) To observe the limitations of a multimeter for measuring high frequency voltage and currents.	
				3) To measure Q of a coil and its dependence on frequency using a Q-meter.	
				4) Measurement of voltage, frequency, time period and phase angle using CRO	
Month A	pril	T.		Module/Unit:	Sub-units planned

Academic Year: 2022-23

Subject: Physics

Name of the teacher: Dr. S. I. Inamdar

Month Ju	une			Module/Unit:	Syllabus covered/Not covered	Remarks
Course	Lect	Practicals	Total	Kinetic Theory of Gases and thermometry	Covered	
B.Sc. II	12		12	Law of equipartition of energy (qualitative) and its applications to specific heat of monoatomic and diatomic gases. Thermometry:		
				Concept of heat and temperature, temperature scales, principle of		
				thermometry mercury thermometer, platinum resistance thermometer, thermocouple. (Principle,		
				construction and theory)		
B.Sc. III	12		12	Lattice Vibration and Thermal Properties of Solid  Lattice vibrations, Phonons, normal modes of one dimensional and diatomic chain, Acoustical and optical phonons, Phonons spectrum in solids, Dulong Petit's law	Covered	
B.Sc. III		80	80	(Classical Theory), Einstein  Practicals:	Covered	
				1) Resonance pendulum.		
				2) S. T. of soap solution.		

				<ul><li>3) S. T. by Fergusson modified method.</li><li>4) Y &amp; η using flat spiral spring.</li></ul>		
Month Ju	ıly			Module/Unit:	Covered	
Course	Lect	Practicals	Total	Kinetic Theory of Gases and thermometry		
B.Sc. II	12		12	Mean free path, expression, approximate method derivation of Maxwell's law of distribution of  velocities and its experimental verification, Transport Phenomena: transport of momentum  (viscosity), transport of thermal energy (conduction), Transport of mass (diffusion),		
B.Sc. III	12	-	12	Crystal Structure  Types of the solids, Amorphous, crystalline, lattice, lattice translation vectors, lattice with basis (Central , non central elements) Unit cell, Examples of crystal structure NaCl, KCl,	Covered	

B.Sc. III	-	80	80	Practicals:	Covered
				1) Self inductance by Owen's bridge.	
				2) Self inductance by Rayleigh's method.	
				3) Self inductance by Maxwell bridge.	
				4) Measurement of BV, BH and $\theta$ using earth inductor.	
				5) Hysteresis by magnetometer.	
Month Au	gust			Module/Unit:	Covered
Course	Lect	Practicals	Total	Laws of Thermodynamics  Thermodynamic system,	
B.Sc. II	12	-	12	thermodynamic variables, thermodynamic state, equation of state, thermodynamic equilibrium,	
				Zeroth Law of thermodynamics, Internal energy, First law of	
				thermodynamics, conversion of heat into work, specific heats CP& CV, Applications of First Law	
				(Isothermal process, Adiabatic process, Isochoric, Isobaric), relation between CP & CV	

B.Sc. III	12	(B)	12	Magnetic Properties of Materials	Covered	
				Magnetic materials, permeability, susceptibility, magnetization, magnetic moment, electron spin, Diamagnetic materials, Paramagnetic materials, ferromagnetic, ferromagnetic, classical theory of diamagnetism and paramagnetism, Curie law, Curie constant, Weiss theory of ferromagnetic domain, Hysteresis loop for ferromagnetic materials.		
B.Sc. III	Œ.	80	80	Practicals:	Covered	
				1) Cardinal points by turn table method.		
				2) Cardinal points by Newton's method.		
				3) Diffraction at single slit.		
				4) Diffraction at cylindrical obstacle.		
				5) Diffraction at straight edge		
Month Sep	tember			Module/Unit:	Covered	
B.Sc. II	Lect	Practicals	Total	Laws of Thermodynamics  Work done during isothermal and adiabatic processes, reversible & irreversible processes, Second law		

	12	-	12	of thermodynamics, Carnot's ideal heat engine, Carnot's cycle (Working, efficiency), Carnot's	
				theorem, Entropy (concept & significance), change in entropy, Entropy changes in reversible &	
				irreversible processes, Third law of thermodynamics, Entropy change in conduction of heat,	
				diffusion of gases ,physical significance of entropy, Unattainability of absolute zero. Zero	
				point energy.	
B.Sc. III	12	-	12	Instrumentations :Introduction to CRO	Covered
				Block Diagram of CRO. Applications of CRO: (1) Study of Waveform, (2) Measurement of Voltage, Current, Frequency, and Phase Difference.	
B.Sc. III	4	80	80	1) 'Y' by Koenig's method.	Covered
				2) 'Y' by cornu's method.	
				3) Measurement of heat capacity of solid.	
				4) S. T. tension by drop weight method.	
				5) Young's modulus by vibration using AFG.	
Month Octo	ober/No	ovember	1	Module/Unit:	

	Lect	Practicals	Total	Examination		
Month Dec	ember			Module/Unit:		
	Lect	Practicals	Total	Thermodynamic Potentials  Enthalpy, Gibbs, Helmholtz,		
B.Sc. II	12		12	Internal Energy functions, Maxwell's thermodynamical relations, Joule-Thomson effect, Clausius- Clapeyron equation, Expression for (CP – CV), CP/CV, TdS equations.		
B.Sc. III	12	-	12	Superconductivity  Idea of superconductivity, Critical temperature, Critical magnetic field. Meissner effect. Type I and type II Superconductors, London's Equation and Penetration Depth, Isotope effect	Covered	
B.Sc. III		80	80	<ol> <li>Practicals:</li> <li>Self inductance by Owen's bridge.</li> <li>Self inductance by Rayleigh's method.</li> <li>Self inductance by Maxwell bridge.</li> <li>Measurement of BV, BH and θ using earth inductor.</li> <li>Hysteresis by magnetometer.</li> </ol>	Covered	
Month Jar	nuary		-	Module/Unit:		

Course	Lect	Practicals	Total	Theory of Radiation	Covered	
	ures			Thermal radiations,		
B.Sc. II	12		12	Blackbody radiation and its importance, Black body in practice, its temperature dependence emissive power, absorptive power, pressure of radiation experimental study of black body radiation spectrum, Concept of energy density, Derivation of Planck's law, Deduction of Wien's distribution law, Rayleigh-Jeans Law, Stefan Boltzmann Law and Wien's displacement law from Planck's law.		
B.Sc. III	12		12	Special functions of ICs  IC 555, Block diagram and special functions if ICs, Astable Operation: Circuit diagram, frequency of oscillation and duty cycle, Applications as tone brust oscillator, voltage controlled frequency shifters. Monostable operation: circuit diagram, Applications as touch switch and frequency divider. Bistable Operation: Circuit diagram and circuit action.	Covered	

B.Sc. III	_	80	80	Practicals :	Covered
3.50. III				1) e/m of electron by Thomson's method.	
				2) Measurement of dielectric constant.	
				3) Resistivity of semiconductor crystal with temperature by four probe method.	
*				5) Calibration of wire using Carey-foster key	(α)
Month Febr	uary	I.		Module/Unit:	Covered
Course	Lect	Practicals	Total	Classical statistics	
B.Sc. II	12		12	Degrees of freedom momentum space, position space phase space, Microstate and Macrostate, Accessible microstates, priory probability thermodynamic probability, probability distribution, Maxwell-Boltzmann distribution law, energy or speed, evaluation of constants α and β, Entropy and Thermodynamic probability, Distribution of molecular speeds.	Covered
B.Sc. III	12	ω	12	Digital Electronics  Introduction to logic gates, De-Morgan's theorem, NAND and NOR gates as universal gates, R-S and J-K flip flops, half and full adder, parallel binary adder.	Covered

B.Sc. III		80	80	Practicals :	Covered
B.Sc. III				1) UJT as voltage sweep generator. 2) Astable multivibrator by using IC 555 timer. 3) Monostable multivibrator by using IC 555 timer. 4) IV characteristics of P-N diode and LED. 5) Inverting amplifier using op - Amp 741.	
Month Mar	ch			Module/Unit:	Covered
Course	Lect	Practicals	Total	Quantum statistics	
B.Sc. II	12	-	12	Need of quantum statics, Bose-Einstein distribution law, photon gas, Planck, s radiation law  Fermi-Dirac distribution law, free electron in metal, electron gas, comparison of M.B., B.E., and  F.D. statistics.	
B.Sc. III	12		12	Bipolar Junction transistors:  n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations. Current gains α and β. Relations between α and β. Load Line analysis of Transistors. DC Load line and Q point. Active, Cut-off, and Saturation Regions. Voltage Divider Bias Circuit for CE Amplifier. h-parameter Equivalent Circuit.	Covered

			Analysis of a single-stage CE amplifier using Hybrid Model. Input and Output Impedance, Current, Voltage and Power Gains.	
B.Sc. III -	80	80	Practicals:  1) Study of divergence of LASER beam.  2) Measurement of wavelength of LASER using grating.  3) Lattice constant using XRD powder.  4) To measure numerical aperture of optical fibre.  5) Obtain interference fringes using Biprism.  Module/Unit:	Sub-units

		Due eti = -1-	Total			
Course	Lect	Practicals	Total	Variational principles		

B.Sc.	12		12	Hamilton's principle, Deduction of Hamilton's principle from D' Alembert's principle, Deduction of Lagrange's equation from Hamilton's principle. Application of Hamilton's principle: shortest distance between two points in plane, Brachistochrone problem.		
B.Sc. II	î	32	32	Practicals:  1) To determine the wavelength of sodium light using Fresenel Biprism.  2) To determine the Resolving Power of a Prism.  3) To determine the Resolving Power of a Plane Diffraction Grating.  4) To determine wavelength of Laser light using diffraction of single slit.	Covered	
	Month February			Module/Unit:	Covered	
Course	Lect ures	Practicals	Total	Non-inertial and Rotating co-ordinate system		

B.Sc. III	12	7	12	Inertial and non-inertial framed of reference Fictitious or Pseudo force, centrifugal force, uniformly rotating frame, Motion relative to earth.  Application of Coriolis force:  1) Formation of cyclone, 2) Particles in a horizontal plane, 3) Freely falling body at earth's surface	
B.Sc. II		32	32	Practicals:  1) To observe the loading effect of a multimeter while measuring voltage across a low resistance and high resistance.  2) To observe the limitations of a multimeter for measuring high frequency voltage and currents.  3) To measure Q of a coil and its dependence on frequency using a Q-meter.  4) Measurement of voltage, frequency, time period and phase angle using CRO.	Covered
Month Ma	arch Lect ures	Practicals	Total	Module/Unit:  Special theory of Relativity	Covered

B.Sc.	12	37X	12	Introduction: Galilean transformation, the Michelson-Morley experiment, Ether hypothesis  Postulates of special theory of relativity, Lorentz transformations, Relativistic addition of  velocities, Length contraction, Time dilation, Variation of mass with velocity, Mass energy relation.	
B.Sc. II	-	32	32	Practicals:  1) To determine the value of Stefan's Constant.  2) To determine the coefficient of thermal conductivity of copper by Searle's Apparatus.  3) To determine the Coefficient of Thermal Conductivity of Cu by Angstrom's Method.  4) To determine the coefficient of thermal conductivity of a bad conductor by Lee and Charlton's disc method.	Covered
Month A				Module/Unit:	Sub-units planned
Lectures		Practicals	Total	Examination	Examination

# Vivekanand College, Kolhapur (Autonomous) Department of Physics Syllabus Completion Report

Academic Year: 2022-23

Subject: Physics

Name of the teacher: Mr. V. S. Ashtekar

Month Ju	une			Module/Unit:	Syllabus covered/ Not covered	Remark
	Practica ls	Lectures	Total	Practicals: 1) Measurements of length (or	Covered	
B.Sc. I	36		36	diameter) using Vernier calliper, screw gauge, spherometer and travelling microscope.  2) To determine the Moment of Inertia of a Flywheel.  3) To determine the Moment of inertia of a disc using auxiliary annular ring.  4) Young's modulus of material of Bar by vibration		
Month J	ulv			Module/Unit:	Covered	
B.Sc. I	36		36	Practicals:  1) Measurements of length (or diameter) using Vernier calliper, screw gauge, spherometer and travelling microscope.  2) To determine the Moment of Inertia of a Flywheel.  3) To determine the Moment of inertia of a disc using auxiliary annular ring.  4) Young's modulus of material of Bar by vibration		
Month A	August			Module/Unit:	Covered	
B.Sc. I	36	).E.	36	Practicals:  1) Modulus of rigidity of material of wire by torsional oscillations.  2) Υ/η of Wire by Searle's method.  3) To determine g by Bar Pendulum.  4) To determine g by Kater's Pendulum.		
Month S	September			Module/Unit:	Covered	

B.Sc. I	36		36	Practicals: 1) To verify the Thevenin theorem. 2) To verify the Norton theorem. 3) Determination of low resistance using Carey foster's Bridge. 4)) Verification of Kirchoff's voltage and current law	Covered
Month March				Module/Unit:	Covered
B.Sc. I	36	-	36	Practicals: 1) To verify the Thevenin theorem. 2) To verify the Norton theorem. 3) Determination of low resistance using Carey foster's Bridge. 4)) Verification of Kirchoff's voltage and current law	
Month April				Module/Unit:	Sub-units planned
