B.Sc-III Statistics

1.Structure of syllabus with credits, workload, theory and internal marks

Sr. No.	Course code (including course type)	Title of course	Credits	Total credits (for each semester)	Workload (per paper per week)No. of lectures	Theory marks	Internal marks
1	DSE 1004E1	Probability Distributions	4	4	6	80	20
2	DSE 1004E2	Sampling Theory & Operations Research	4	4	6	80	20
3	SEC 3	Statistical Computing using R	2			50	
4	DSE 1004F1	Statistical Inference	4	4	6		
5	DSE 1004F2	Design of Experiments, Quality Management & Data Mining	4	4	6		
6	SEC 4	Project work	2			50	

Practical

Paper No	Title of the Practical	Marks for Practical	Journal	Oral	Study Tour & Report	Total Marks
IV	Probability Distributions	40	04	04		50
V	Sampling Theory & Operations Research	40	04	04	08	50
VI	Statistical Inference	40	04	04		50
VII	Design of Experiments, Quality Management & Data Mining	40	04	04		50

Note :

1. SEC -S Examination will be conducted annually for E & F separately. (50 marks each)

2. Project will be conducted in a group of 5 students

3.Practical examination will be conducted annually

2.Eqivalence of syllabus

Semester No.	Paper No.	Title of Old paper	Title of New paper	Course code
1	IX	Probability Distributions I	Probability Distributions	DSE 1004E1
	X	Statistical Inference I	Sampling Theory & Operations Research	DSE 1004E2
	XI	Design of Experiments		
	XII	Operations Research		
2	XIII	Probability Distributions II	Statistical Inference	DSE 1004F1
	XIV	Statistical Inference II	Design of Experiments, Quality Management & Data Mining	DSE 1004F2
	XV	Sampling Theory		
	XVI	Quality management and Data mining		

3.Structure of assessment and question paper pattern

1.Internal Evaluation per paper

Semester	Evaluation	Marks
V	1. Unit test	10
	2. Multiple choice questions.	10
VI	1. Unit test	10
	2. Multiple choice questions.	10

2.Theory Evaluation per paper/course for each semester

Nature of Theory Question Paper   Total marks 80

Instructions:
   1) All the questions are compulsory.
   2) Answers to the two sections should be written in same answer book.
   3) Figures to the right indicate full marks.
   4) Draw neat labeled diagrams wherever necessary.
   5) Use of log table/calculator is allowed.

SECTION-I   Total Marks: 40
Q.1. Choose correct alternative. (8 marks)
 i)   A)   B)   C)   D)

ii)   **A)**   **B)**   **C)**   **D)**

iii)   **A)**   **B)**   **C)**   **D)**

iv)   **A)**   **B)**   **C)**   **D)**

v)   **A)**   **B)**   **C)**   **D)**

vi)   **A)**   **B)**   **C)**   **D)**

vii)   **A)**   **B)**   **C)**   **D)**

viii)   **A)**   **B)**   **C)**   **D)**

Q.2. Attempt any two. (16 marks)
  A)
  B)
  C)
Q.3. Attempt any four. (16 marks)
  a)
  b)
  c)
  d)
  e)
  f)
Nature of question paper for Section II is same as Section I

3. Nature of practical papers:
(i) Each practical question paper must contain Four questions.
(ii) Each question should contain Two bits from different units.
(iii) Student should attempt Any Two questions.
(iv) Each question should carry 20 marks and to be distributed according to
Following points:
(a) Aim of the Experiment: 2 Marks
(b) Statistical formulae: 4 Marks
(c) Observation Tables: 6 Marks
(d) Calculations: 6 Marks
(e) Conclusion/ result of the experiment :2 Marks.

4.Cours/paper wise syllabus

B. Sc. Part – III Statistics
Semester: V Paper- DSE 1004E1
Probability Distributions

| Marks: 80 | Theory: 72 Hours | Credits 4 |

Section I: Probability Distributions-I

Course Objectives:
➢ To understand the concept of standard continuous distributions.
➢ To study various real-life situations where these continuous distributions are applicable.
➢ To learn the concept of truncated distribution and its applications.
➢ To understand the concept of multivariate random variables.

Course Outcomes:
 The students will acquire
➢ knowledge of important univariate distributions such as Laplace, Cauchy, Lognormal, Weibull, Logistic, Pareto, Power Series Distribution.
➢ knowledge of Multinomial and Bivariate Normal Distribution.
➢ knowledge of Truncated Distributions.
➢ Knowledge to apply standard continuous probability distributions to different real life data/situations.

Unit	Content	Hours Allotted
1	**Univariate Continuous Probability Distributions** **1.1 Laplace (Double Exponential) Distribution** P. d. f. with parameters (μ, λ), Nature of the probability curve, Distribution function, quartiles, m. g. f., mean, variance, moments, β_1, β_2, γ_1 and γ_2, Laplace distribution as the distribution of the difference of two i. i. d. exponential variates with parameter θ, examples and problems. **1.2 Lognormal Distribution** P.d.f. with parameters (μ, σ^2), Nature of the probability curve, mean, variance, median, mode, moments, β_1, β_2, γ_1 and γ_2 coefficients, Relation with $N(\mu, \sigma^2)$ **1.3 Cauchy Distribution** P. d. f. with parameters (μ, λ), nature of the probability curve, distribution function, quartiles, non-existence of moments, additive property for two independent Cauchy variates (statement only), statement of distribution of the sample mean, relationship with uniform and Students' t distribution, distribution of X/Y where X and Y are i. i. d. N(0, 1), examples and problems. **1.4 Weibull Distribution** P. d. f. with parameters (α, β), distribution function, quartiles, mean and variance, coefficient of variation, relation with gamma and exponential distribution, examples and problems.	15
2	**Univariate and Multivariate Probability Distributions** **2. 1 Logistic distribution:** P.d.f. with parameters (μ, σ) ,c.d.f., mean, mode , variance, skewness using	12

	mode, applications. **2..2 Paroto distribution**: P.d.f. with parameters (α, β), mean, variance, mode, skewness using mode, applications. **2.3 Power series distribution**: P.m.f. mean, mode, variance, Binomial, Poisson, Geometric and negative binomial distribution as particular cases of power series distribution. **2.4 Multinomial distribution:** P.m.f, m.g.f., marginal distribution, mean, variance, covariance, variance and covariance matrix, correlation coefficient, additive property, Trinomial distribution as particular case of multinomial distribution.	

3	**Truncated Distributions**
	Truncated distribution as conditional distribution, truncation to the right, left and on both sides. Binomial distribution B(n, p) left truncated at X = 0 (value zero not observable), its p.m.f, mean, variance.
	Poisson distribution P(m), left truncated at X = 0 (value zero not observable), its p.m.f., mean and variance.
	Normal distribution N(μ, σ^2) truncated
	    (i) to the left below a
	    (ii) to the right above b
	    (iii) to the left below a and to the right above b, its p.d.f. and mean.
	Exponential distribution with parameter $\square$ left truncated below a, its p.d.f., mean and variance. Examples and problems.
		8

4	**Bivariate Normal Distribution** p. d. f. of a bivariate normal distribution, $BN(\mu_1 \mu_2, \sigma_1^2, \sigma_2^2, \rho)$ marginal and conditional distributions, identification of parameters, conditional expectation and conditional variance, regression of Y on X and of X on Y., independence and uncorrelated-ness imply each other, m. g. f and moments. Distribution of aX + bY + c, where a, b and c are real numbers. Cauchy distribution as the distribution of Z = X/Y where $(X,Y) \sim BN(0, 0, \sigma^2_1, \sigma^2_2, \rho)$, Examples and problems.	10

Section II: Probability Theory - II

Course Objectives

➢ .
➢ To learn concept of order statistics.
➢ To understand convergence, weak law of large numbers and central limit theorem problem, assignment problem.
➢ To understand concepts related to project management technique.

Course Outcomes:

The students will acquire

➢ knowledge about order statistics and associated distributions
➢ concept of Markov chains and Queuing theory.

Unit	Content	Hours Allotted
1	**Order Statistics** Order statistics for a random sample of size n from a continuous distribution, Joint distribution, definition, derivation of distribution function and density function of the i- th order statistic, particular cases for i=1 and i=n. Derivation of joint p. d. f. of i -th and j- th order statistics, statement of distribution of the sample range. Distribution of the sample median when n is odd. Examples and Problems.	10

2	**Convergence and Limit Theorem**
	 2.1: Convergence
	   i. Definition of convergence of sequence of random variables (a) in probability, (b) in distribution, (c) in quadratic mean.
	   ii. If $X_n^p \to X$ then $g(X_n^p) \to g(X)$ where g is continuous function without proof.
	 Examples and Problems.
	
	 2.2: Weak Law of Large Numbers and Central Limit Theorem
	   iii. Weak law of large numbers (WLLN) statement and proof for i. i. d. random variables with finite variance.
	   iv. Central limit theorem: Statement and proof for i. i. d. random variables with finite variance, proof based on m. g. f.
	   v. Simple examples based on Bernoulli, binomial, Poisson and chi-square distribution.
		12

3	**Finite Markov Chains** **3.1: Basic concepts:** Definition and examples of stochastic process, classification of general stochastic process into discrete – continuous time, discrete – continuous state space, type of stochastic process, problems and examples. **3.2: Markov chain:** Definition and examples of Markov chain, stochastic matrix, transition probability matrix, Chapman - Kolmogorov equation (statement only), n step transition probability matrix, classification of states, simple	12

	problems. Stationary probability distribution, applications.	
	3.3: Continuous Markov chain: Pure birth process, Poisson process, birth and death process. (Derivations not expected). Examples and problems.	
4	**Queuing Theory** i. Introduction, essential features of queuing system, input source, queue configuration, queue discipline, service mechanism. ii. Operating characteristics of queuing system, transient- state and steady state, queue length, general relationship among system characteristics. iii. Probability distribution in queuing system: Distribution of arrival, distribution of inter arrival time, distribution of departure and distribution of service time (Derivations are not expected). iv. Types of queuing models: v. Solution of queuing Model: M/M/1, using FCFS queue discipline. vi. Problems and examples.	11

Marks: 80	Theory: 72 Hours	Credits 4

Section I: Sampling Theory

Course Objectives

➢ To design and execute sample surveys.
➢ To learn some sampling methods and its applications in appropriate situations.
➢ To estimate population parameters using sampling distribution of estimator and obtaining estimators of standard error in estimation.
➢ To determine adequate sample size for various sampling procedures.

Course Outcomes:

➢ The students shall get
➢ basic knowledge of complete enumeration and sample, sampling frame sampling distribution, sampling and non-sampling errors, principle steps in sample surveys, sample size determination, limitations of sampling etc.
➢ introduced to various sampling methods such as simple random sampling, stratified random sampling, systematic sampling and cluster sampling.
➢ an idea of conducting sample surveys and selecting appropriate sampling techniques.
➢ knowledge of comparing various sampling techniques.
➢ knowledge of ratio and regression estimators.

Unit	Content	Hours Allotted

1	**Basic Terminology and Simple Random Sampling**
	1.1: Basic Terminology
	Concept of distinguishable elementary units, sampling units, sampling frame, random sampling and non-random sampling. Advantages of sampling method over census method, objectives of a sample survey, Designing a questionnaire, Characteristics of a good questionnaire, Concept of sampling and non-sampling errors. Handling of non- response cases.
	
	1.2: Simple random sampling
	i. Simple random sampling from finite population of size N with replacement (SRSWR) and without replacement (SRSWOR): Definitions, population mean and population total as parameters, inclusion probabilities.
	ii. Following results with proof.
	  a) In SRSWOR, the probability of a specified unit being selected in sample at any given draw is equal to 1/N.
	  b) In SRSWOR, the probability of a specific unit included in the sample is n/N.
	  c) In SRSWOR, the probability of drawing a sample of size 'n' from a population of size N units is $1/\binom{N}{n}$.
	  d) In SRSWR, the probability of a specific unit included in the sample is $1-\left(1-\frac{1}{N}\right)^n$
	  e) In SRSWR, the probability of drawing a sample of size 'n' from a population of size N units is $1/N^n$
	iii. Sample mean $\bar{y}$ as an estimator of population mean $\bar{Y}_N$, derivation of its expectation, standard error and estimator of standard error.
		15

	iv. $N\bar{y}$ as an estimator of population total, derivation of its expectation, standard error and estimator of standard error. v. Sampling for dichotomous attributes. Estimation of population proportion Sample proportion (p) as an estimator of population proportion (P), derivation of its expectation, standard error and estimator of standard error using SRSWOR. Np as an estimator of total number of units in the population possessing the attribute of interest, derivation of its expectation, standard error and estimator of standard error. **1.3: Determination of the sample size.** Determination of the sample size (n) for the given: i. Margin of error and confidence coefficient. ii. Coefficient of variation of the estimator and confidence coefficient.	

2	**Stratified Sampling**
	  i. Real life situations where stratification can be used.
	  ii. Description of stratified sampling method where sample is drawn from individual stratum using SRSWOR method.
	    a) $\underline{y}_{st}$ as an estimator of population mean $\bar{Y}_N$, derivation of its expectation, standard error and estimator of standard error.
	    b) $N\underline{y}_{st}$ as an estimator of population total, derivation of its expectation, standard error and estimator of standard error.
	  iii. Problem of allocation: Proportional allocation, Neyman's allocation and optimum allocation, derivation of the expressions for the standard errors of the above estimators when these allocations are used.
	  iv. Comparison amongst SRSWOR, stratification with proportional allocation and stratification with optimum allocation.
	  v. Cost and variance analysis in stratified random sampling, minimization of variance for fixed cost, minimization of cost for fixed variance, optimum allocation as a particular case of optimization in cost and variance analysis.
		15

3	**Other Sampling Methods**
	3.1: systematic Sampling
	  i. Real life situations where systematic sampling is appropriate. Technique of drawing a sample using systematic sampling.
	  ii. Estimation of population mean and population total, standard error of these estimators.
	  iii. Comparison of systematic sampling with SRSWOR.
	  iv. Comparison of systematic sampling with SRSWOR and stratified sampling in the presence of linear trend.
	  v. Idea of Circular Systematic Sampling.
	
	3.2: Cluster Sampling
	  i. Real life situations where cluster sampling is appropriate. Technique of drawing a sample using cluster sampling.
	  ii. Estimation of population mean and population total (with equal size clusters), standard error of these estimators
	  iii. Systematic sampling as a particular case of cluster sampling.
	
	3.3: Two Stage and Multi Stage Sampling
		10

	Idea of two-stage and multistage sampling.	

4	**Sampling Methods using Auxiliary variables**
	4.1: Ratio Method
	   i. Concept of auxiliary variable and its use in estimation
	  ii. Situations where Ratio method is appropriate.
	 iii. Ratio estimators of the population mean and population total and their standard errors (without derivations), estimators of these standard errors.
	 iv. Relative efficiency of ratio estimators with that of SRSWOR
	
	4.2: Regression Method
	   i. Situations where Regression method is appropriate.
	  ii. Regression estimators of the population mean and population total and their standard errors (without derivations), estimators of these standard errors.
	 iii. Comments regarding bias in estimation
	 iv. Relative efficiency of regression estimators with that of
	 a) SRSWOR b) Ratio estimator.
		05

Books Recommended
1. Cochran, W.G: Sampling Techniques, Wiley Eastern Ltd., New Delhi.
2. Sukhatme, P.V. and Sukhatme, B.V.: Sampling Theory of Surveys with Applications, Indian Society of Agricultural Statistics, New Delhi.
3. Des Raj: Sampling Theory.
4. Daroga Singh and Choudhary F.S.; Theory and Analysis of Sample Survey Designs, Wiley Eastern Ltd., New Delhi.
5. Murthy, M.N: Sampling Methods, Indian Statistical Institute, Kolkata.
6. Mukhopadhay, Parimal: Theory and Methods of Survey Sampling, Prentice Hall.

Course Objectives

➢ To convert given practical situations to the format of linear programming problem.
➢ To learn concept of optimal solution.
➢ To understand special cases of LPP viz. transportation problem, assignment problem.
➢ To understand decision theory.
➢ **Course Outcomes**:
 The students will acquire
➢ Concept of Linear programming problem.
➢ Knowledge of solving LPP by graphical and Simplex method.
➢ Knowledge of Transportation, Assignment and Sequencing problems.
➢ Knowledge of types of decision making environments and to take decisions in such environments.
➢ Knowledge of simulation technique and Monte Carlo technique of simulation.

Unit	Content	Hours Allotted
1	**Linear programming** **1.1: Basic concepts** Statement of the Linear Programming Problem (LPP), formulation of problem as Linear programming problem. Definition of (i) a slack variable, (ii) a surplus variable. L.P. problem in (i) canonical form, (ii) standard form. Definition of (i) a solution, (ii) a feasible solution, (iii) basic variable and non-basic variable, (iv) a basic feasible solution, (v) a degenerate and a non-generate solution, (vi) an optimal solution. **1.2: Solution of L.P.P.** i. Graphical Method: Solution space, obtaining an optimal solution, unique and non- unique optimal solutions. ii. Simplex Method: a) Initial basic feasible solution (IBFS) is readily available: obtaining an IBFS, criteria for deciding whether obtained solution is optimal, criteria for unbounded solution, more than one optimal solution. b) IBFS not readily available: introduction of artificial variable, Big-M method, modified objective function, modifications and applications of simplex method to L.P.P., criterion for no solution. **1.3: Duality Theory**: Writing dual of a primal problem, solution of L.P.P. with artificial variable. Examples and problems.	15
2	**Transportation and Assignment Problems** **2.1: Transportation problem** i. Transportation problem (T. P.), statement of T. P., balanced and unbalance T. P. ii. Methods of obtaining initial basic feasible solution of T.P. (a) North West corner rule (b)Method of matrix minima (least cost method), (c) Vogel's approximation (VAM). iii. MODI method of obtaining Optimal solution of T. P, uniqueness and non-uniqueness of optimal solutions, degenerate solution. iv. Examples and problems. **2.2: Assignment Problem**	12

	i. Statement of an assignment problem, balanced and unbalanced assignment problem, relation with T.P, optimal solution of an assignment problem using Hungarian method. ii. Examples and problems. **2.3: Sequencing Problem** i. Introduction. Statement of problem. ii. Procedure of processing n jobs on two machines. iii. Procedure of processing n jobs on three machines and m machines. Computations of elapsed time and idle times. iv. Examples and problems.	
3	**Decision Theory** i. Introduction, steps in decision theory approach. ii. Type of decision-making environments. iii. Decision making under uncertainty: Criteria of optimism, criteria of pessimism, equally likely decision criterion, criterion of regret. iv. Decision making under risk: Expected monetary value, expected opportunity loss, expected value of perfect information. v. Examples and problems.	08
4	**Simulation Techniques** Meaning of simulation, Monte Carlo simulation, advantages and disadvantages of simulation, definition and properties of random numbers, generation of pseudo random numbers, Mid-Square method, Techniques of generating random numbers from uniform distribution, Tests for randomness and uniformity distribution, random variate generation using inverse cdf method, random variate generation from Bernoulli, Binomial, Poisson, Geometric, Exponential and normal distributions.	10

Semester: VI Paper- DSE 1004F1
Probability Theory & Statistical Inference - II

| Marks: 80 | Theory: 72 Hours | Credits 4 |

Section I : Statistical Inference – I

Course Objectives
➢ To get acquainted with notion of parameter and estimator.
➢ To learn and apply various methods of estimation.
➢ To understand concept of point estimation and interval estimation.

Course outcomes:
  The students will acquire
➢ Knowledge about important inferential aspects such as point estimation.
➢ knowledge of various important properties of estimator,
➢ knowledge about inference of parameters of standard discrete and continuous distributions.
➢ Concept of CR inequality.
➢ knowledge of different methods of estimation.

Unit	Content	Hours Allotted
1	**Point Estimation** **1.1** Notion of a parameter, parameter space, general problem of estimation, estimating an unknown parameter by point and interval estimation. **1.2** Point estimation: Definition of an estimator (statistic) & its S.E., distinction between estimator and estimate, illustrative examples. Properties of estimator: Unbiased estimator, biased estimator, positive and negative bias, examples of unbiased and biased estimators. Proofs of the following results regarding the unbiased estimators: (a) Two distinct unbiased estimators of $\Psi(\theta)$ give rise to infinitely many unbiased estimators of $\Psi(\theta)$ (b) If T is unbiased estimator of θ then $\Psi(T)$ is an unbiased estimator of $\Psi(\theta)$ provided $\Psi(.)$ is a linear function. Sample variance is a biased estimator of the population variance. Illustration of unbiased estimator for the parameter and parametric function. **1.3** Relative efficiency of T_1 with respect to T_2, where T_1 and T_2 are unbiased estimators. Use of mean square error to modify the above definition for biased estimator. Minimum Variance Unbiased Estimator (MVUE) and Uniformly Minimum Variance Unbiased Estimator (UMVUE), uniqueness of UMVUE whenever it exists. Illustrative examples. **1.4** Consistency: Definition, proof of the following (c) Sufficient condition for consistency, (d) If T is consistent for θ and $\Psi(.)$ is a continuous function then $\Psi(T)$ is consistent for $\Psi(\theta)$ Illustrative examples.	15
2	**Likelihood and Sufficiency** **2.1** Definition of likelihood function as a function of the parameter $\square$ for a random sample from discrete and continuous distributions. Illustrative examples.	12

	2.2 Sufficiency: Concept of sufficiency, definition of sufficient statistic through (i) conditional distribution (ii) Neyman factorization criterion. Pitman Koopmans form and sufficient statistic. Proof of the following properties of sufficient statistic: a) If T is sufficient for θ then $\Psi(T)$ is also sufficient for θ provided $\Psi(.)$ is a one to one function. b) If T is sufficient for θ then T is sufficient for $\Psi(\theta)$. **2.3** Fisher information function: Definition of information function, amount of information contained in a sample. Statement regarding equality of the information in $(x_1, x_2, \ldots, x_n)$ and in a sufficient statistic T, concept of minimal sufficient statistic. With illustrations to exponential family. Illustrative examples.	
3	**Cramer Rao Inequality** Statement and proof of Cramer Rao inequality. Definition of Minimum Variance Bound Unbiased Estimator (MVBUE) of $\Psi(\theta)$. Proof of the following results: (i) If MVBUE exists for θ then MVBUE exists for $\Psi(\theta)$, if $\Psi(.)$ is a linear function. (ii) If T is MVBUE for θ then T is sufficient for θ. Examples and problems.	7
4	**Methods of Estimation** 4.1 Method of maximum likelihood, derivation of maximum likelihood estimators for parameters of standard distributions. Use of iterative procedure to derive MLE of location parameter $\square$ of Cauchy distribution, invariance property of MLE, relation between MLE and sufficient statistic. Illustrative examples. 4.2 Method of moments: Derivation of moment estimators for standard distributions. Illustrations of situations where MLE and moment estimators are distinct and their comparison using mean square error (for uniform distribution). Illustrative examples. 4.3 Method of minimum chi-square: Definition, derivation of minimum chi-square estimator for the parameter. Illustrative examples.	11

<u>**Section II: Statistical Inference – II**</u>

Course Objectives
➢ To understand concept of statistical hypothesis and use of its in real life situations.
➢ To learn MP and UMP test procedure and difference between them.
➢ To understand Parametric and Nonparametric tests
Course outcomes:
The students will get
      ➢ Knowledge of interval estimation.
      ➢ Acquainted with testing of hypotheses.
      ➢ Knowledge of nonparametric statistical inference and various tests.

Unit	Content	Hours Allotted
1	**Interval Estimation** 1.1: Notion of interval estimation, definition of confidence interval, length of confidence interval, confidence bounds. Definition of Pivotal quantity and its us in obtaining confidence intervals and bounds. 1.2: Interval estimation for the following cases: i. Mean μ of normal distribution (σ^2 known and σ^2 unknown). ii. Variance σ^2 of normal distribution (μ known and μ unknown). iii. Difference between two means μ_1- μ_2, a) for a sample from bivariate normal population, b) for samples from two independent normal populations. iv. Ratio of variances for samples from two independent normal populations. v. Mean of exponential distribution. vi. Population proportion and difference of two population proportions of two independent large samples. vii. Population median using order statistics. viii. Illustrative examples.	11
2	**Parametric Tests** 2.1: Statistical hypothesis, problems of testing of hypothesis, definitions and illustrations of simple hypothesis composite hypothesis, critical region, type I and type II error, probabilities of type I & type II errors. Power of a test, p-value, size of a test, level of significance, problem of controlling probabilities of type I & type II errors. 2.2: Definition of Most Powerful (MP) test. Statement and proof (sufficient part) of Neyman-Pearson (NP) lemma for simple null hypothesis against	13

	simple alternative hypothesis for construction of MP test. Examples of construction of MP test of level α. **2.3:** Power function of a test, power curve, definition of uniformly most powerful (UMP) level α test. Use of NP lemma for constructing UMP level α test for one-sided alternative. Illustrative examples. **2.4:** Likelihood Ratio Test: Procedure of likelihood ratio test, statement of its properties, Likelihood Ratio test involving mean and variance of normal population.	
3	**Sequential Tests** General theory of sequential analysis and its comparison with fixed sample procedure. Wald's SPRT of strength (α, β), for simple null hypothesis against simple alternative hypothesis. Illustrations for standard distributions like binomial, Poisson, exponential and normal. Graphical and tabular procedure for carrying out the test. Illustrative examples.	09

4	**Non- parametric Test**
	Notion of non-parametric statistical inference (test) and its comparison with parametric statistical inference. Concept of distribution free statistic. Test procedure of:
	  i. Run test for one sample (i.e. test for randomness) and run test for two independent sample problems.
	  ii. Sign test for one sample and two sample paired observations
	 iii. Wilcoxon's signed rank test for one sample and two sample paired observations.
	 iv. Mann-Whitney U - test (two independent samples)
	  v. Median test
	 vi. Kolmogorov Smirnov test for one and for two independent samples.

Marks: 80   Theory: 72 Hours   Credits 4

Section I: Design of Experiment

Course Objectives
- To understand principles of Design of Experiments (DOE) and planning of experiments.
- To understand concept of one-way and two-way analysis of variance.
- To get knowledge of using appropriate experimental designs to analyze the experimental data.

  Course outcomes:

 The students shall get
- Understand the basic terms in design of experiments.
- Carry out one way and two Analysis of Variances.
- Give statistical interpretation of the experimental results obtained.
- Concept of efficiency of design.
- Concept of ANOCOVA
- Understand factorial experiments.

Unit	Content	Hours Allotted
1	**Simple Designs of Experiments I:** **1.1: Basic Concepts:** i. Basic terms in design of experiments: Experimental unit, treatment, layout of an experiment. ii. Basic principles of design of experiments: Replication, randomization and local control. iii. Choice of size and shape of a plot for uniformity trials, the empirical formula for the variance per unit area of plots. **1.2: Completely Randomized Design (CRD)** i. Application of the principles of design of experiments in CRD, layout, model, assumptions and interpretations: ii. Estimation of parameters, expected values of mean sum of squares, components of variance. iii. Breakup of total sum of squares in to components. iv. Technique of one-way analysis of variance (ANOVA) and its applications to CRD. v. Testing for equality for treatment effects and its interpretation. F-test for testing H0, test for equality of two specified treatment effects	10
2	**Simple Design of Experiments II** **2.1 Randomized Block Design (RBD):** i. Application of the principles of design of experiments in RBD, layout, model, assumptions and interpretations: ii. Estimation of parameters, expected values of mean sum of squares, components of variance. iii. Breakup of total sum of squares into components. iv. Technique of two-way analysis of variance (ANOVA) and its applications to RBD. v. Tests and their interpretations, test for equality of two specified treatment effects, vi. comparison of treatment effects using critical difference (C.D.).	15

	vii. Idea of missing plot technique.
	viii. Situations where missing plot technique is applicable.
	ix. Analysis of RBD with single missing observation.
	
	2.2 Latin Square Design (LSD)
	  i. Application of the principles of design of experiments in LSD, layout, model, assumptions and interpretations:
	  ii. Breakup of total sum squares into components.
	 iii. Estimation of parameters, expected values of mean sum of squares, components of variance. preparation of analysis of variance (ANOVA) table.
	 iv. Tests and their interpretations, test for equality of two specified treatment effects, comparison of treatment effects using critical difference (C.D.).
	  v. Analysis of LSD with single missing observation.
	 vi. Identification of real-life situations where CRD, RBD AND LSD are used.	

3	**Efficiency of design and ANOCOVA**
	3.1 Efficiency of design
	    i. Concept and definition of efficiency of a design.
	   ii. Efficiency of RBD over CRD.
	  iii. Efficiency of LSD over CRD and LSD over RBD.
	3.2 Analysis of Covariance (ANOCOVA) with one concomitant variable
	  iv. Purpose of analysis of covariance.
	   v. Practical situations where analysis of covariance is applicable.
	  vi. Model for analysis of covariance in CRD and RBD. Estimation of parameters (derivations are not expected).
	 vii. Preparation of analysis of covariance (ANOCOVA) table, test for $\beta = 0$, test for equality of treatment effects (computational technique only).
	Note: For given data, irrespective of the outcome of the test of regression coefficient β, ANOCOVA should be carried out.
		10

4	**Factorial Experiments**
	  i. General description of factorial experiments, 2^2 and 2^3 factorial experiments arranged in RBD.
	  ii. Definitions of main effects and interaction effects in 2^2 and 2^3 factorial experiments.
	 iii. Model, assumptions and its interpretation.
	 iv. Preparation of ANOVA table by Yate's procedure, test for main effects and interaction effects.
	  v. General idea and purpose of confounding in factorial experiments.
	 vi. Total confounding (Confounding only one interaction): ANOVA table, testing main effects and interaction effects.
	 vii. Partial Confounding (Confounding only one interaction per replicate): ANOVA table, testing main effects and interaction effects.
	viii. Construction of layout in total confounding and partial confounding in 2^3 factorial experiment.

Section II: Quality Management and Data Mining

Course Objectives
- To study the concepts of quality and its dimensions.
- To get acquainted with Six Sigma methodology.
- To study some acceptance sampling plans.
- To understand basic terms of data mining.
- To learn some classification and clustering techniques.

Course outcomes:

The students will get
- knowledge of quality tools used in Quality management.
- Knowledge of Six sigma methodology.
- Difference between process control and product control.
- Basic knowledge of data mining.

Unit	Content	Hours Allotted
1	**Quality Tools** Meaning and dimensions of quality, quality philosophy, Magnificent tools of quality: Histogram, Check sheet, Pareto diagram, cause and effect diagram, scatter diagram, control chart, flow chart. Deming's PDCA cycle for continuous improvements and its applications.	10
2	**Process Control** CUSUM chart, tabular form, use of these charts for monitoring process mean. Moving average and exponentially weighted moving average charts. Introduction to six-sigma methodology, DMAIC cycle and case studies.	12
3	**Product Control** Sampling Inspection plans for attribute inspection: Concept of AQL, LTPD, Consumer's risk, producer's risk, AOQ, AOQL, OC, ASN and ATI. Description of Single and double sampling plans with determination of above constants.	13
4	**Data Mining.** 4.1: Data preparation for knowledge discovery: Data understanding and data cleaning tools, Data transformation, Data Discretization, Data Visualization. 4.2: Data Mining Process: CRISP and SEEMA; Concept of training data, testing data and validation of model. Supervised and unsupervised learning techniques: Problem of classification, classification techniques: k nearest neighbor, Naïve Bayes rule for two-class problem with only one attribute variable, accuracy sensitivity and specificity of classifiers, cluster analysis using k-means with illustration for bivariate data.	10

Books Recommended
1. Introduction to quality Control – Montgomery D. C.
2. Quality Control and Industrial statistics Duncan A J
3. Statistical Quality Control by E L Grant
4. Data Mining-Concept and Techniques: JiaweiHan.MichelineKamber and Jian Pei.
5. Data Mining- Introductory and Advanced Topics: Margret.H and Dunham
6. Introduction to Data Mining with case studies: G.K.Gupta
7. Data Mining Application with R: Zhao.

Practical Paper IV

Probability Distributions and R – Software

1. Model sampling from Laplace and Cauchy distributions
2. Model sampling from pareto distribution
3. Model sampling from truncated binomial and poison distributions.
4. Model sampling from truncated normal and exponential distributions.
5. Model sampling from bivariate normal distribution.
6. Fitting of truncated binomial distribution.
7. 7.Fitting of truncated Poisson distribution.
8. Application of multinomial distribution.
9. Application of bivariate normal distribution.
10. Data input/output, diagrammatic and graphical representation of data using R-Software.
11. Computation of probabilities of type I and type II errors and power of a test using R- Software.
12. Model sampling from log-normal and Weibull distributions using R-Software.
13. Model sampling from logistic distribution using R-Software.
14. Fitting of Binomial and Poisson distribution using R-Software.
15. Fitting of Normal distribution using R-Software.
16. Fitting of log-normal distribution using R-Software.
17. Analysis of Completely Randomized Design (CRD)using R-Software.
18. Analysis of Randomized Block Design (RBD)using R-Software.

Reference Books:
1. Purohit Sudha: Lecture notes on R.
2. Verzani: Using R for introductory Statistics.

PRACTICAL PAPER – V

Statistical Inference - I

1. Point estimation by method of moments for discrete distributions.
2. Point estimation by method of moment for continuous distributions.
3. Point estimation by method of maximum likelihood (one parameter).
4. Point estimation by method of maximum likelihood (two parameters).
5. Point estimation by method of minimum chi-square.
6. Interval estimation of location and scale parameters of normal distribution (single sample).
7. Interval estimation of difference of location and ratio of scale parameters of normal distribution (two samples).
8. Interval estimation for population proportion and difference between two population proportions.
9. Interval estimation for population median using order statistics.
10. Construction of MP test.
11. Construction of UMP test.
12. Construction of SPRT for binomial, Poisson distributions, graphical representation of procedure.
13. Construction of SPRT for exponential and normal distribution, graphical representation of procedure.
14. NP test- -Run test (for one and two independent samples).

15. NP test –Sign test and Wilcoxon's signed rank test (for one and two samples paired observation).
16. 16 NP test-- Mann-Whitney U- test (for two independent samples).
17. NP test –Median test (for two large independent samples)
18. NP test—Kolmogorov - Smirnov test (for one and two independent samples).

PRACTICAL PAPER – VI

Design of Experiments and Sampling Methods

1. Analysis of CRD and RBD.
2. Analysis of Latin Square Design (LSD).
3. Missing Plot Technique for RBD and LSD with one missing observation.
4. Efficiency of i) RBD over CRD and ii) LSD over CRD and RBD.
5. Analysis of Covariance in CRD.
6. Analysis of Covariance in RBD.
7. Analysis of 22 and 23 Factorial Experiment.
8. Total Confounding.
9. Partial Confounding.
10. Simple Random Sampling for Variables.
11. Simple Random Sampling for Attributes.
12. Determination of Sample Size in SRS for Variables and Attributes.
13. Stratified Random Sampling – I
14. Stratified Random Sampling – II
15. Ratio Method of Estimation.
16. Regression Method of Estimation.
17. Systematic Sampling.
18. Cluster Sampling.

PRACTICAL PAPER VII

Operations Research and Quality Management

1. L.P.P. by simplex method I (Slack variable)
2. L.P.P. by simplex method II (Big M method)
3. Transformation problem-I.
4. Transformation problem-II. (Degeneracy)
5. Assignment problem.
6. Sequencing Problem.
7. Decision Theory.
8. Simulation I (Discrete distribution)
9. Simulation II (Continuous distribution)
10. EWMA-Chart.
11. CUSUM chart.
12. Six sigma limits for mean.
13. Single sampling plan-I (Small sample).
14. Single sampling plan-II (Large sample).
15. Double sampling plan-I (Small sample.
16. Double sampling plan-II (Large sample).
17. k-nearest neighbor technique for classification.
18. k-means technique for clustering.

SKILL Enhancement Course I

Statistical Computing Using R

The main objective of the course is to get acquainted with

➢ R programming with some basic notations for developing their own simple programs. And visualizing graphics in R.

➢ Generation of random sample from various distributions by inverse transformation method.

Syllabus

1. Installation and introduction to R, History.

2. Data Input/ Output and Operators
   Assignment Operators in R: Leftwards assignment (<-, <<-, =), Rightwards assignment (->, ->>)
   -Creation of vector using commands: Combine (c), scan, cbind, rbind, seq, rep, edit, sort, length, which, order.
   -Relation operators: Less than, Greater than, Less than or equal to, Greater than or equal to, Equal to, Not equal to.
   -Logical Operators: Logical NOT, Element-wise logical AND, Logical AND, Element-wise logical OR, Logical OR

3. Operations on data
   -Operations on vectors: sum, prod, sort, rank, multiplication, division, exponent, modulus, integer division, max, min, summary.
   - Object identification: is.na, is.numeric, is.character, is.matrix, is.vector, is.null, is.factor. as. Functions.

4. Matrix manipulation:
   -Creation of Matrix, Transpose, Addition, Subtraction, Multiplication, Determinant, Inverse of matrix, rank of matrix, diagonal matrix, zero matrix, common matrix.

5. Creation of data frame using commands: data.frame, dimension of data frame, extracton of elements of data frame, rbind, cbind functions, rowSums, colSums, rowMeans, colMeans, subset, attach, detach, apply functions.

6. Import and export data: read.table, read.csv, file.choose, write.table, write.csv.

7. Data visualization: r plot, Scatter Plot, hist, boxplot.
   - Diagrammatic representation of data: simple bar diagram, Sub - divided simple bar diagram, pie diagram.
   - Graphical representation of data: Histogram, frequency polygon, Ogive curves.

8. For loop, while loop, if else statement, break statement.

9. Exploratory data analysis: mean, variance, quantiles, pdf, cdf, random numbers, correlation, summary.

10. Statistical tools: prop.test, t.test, wilcox.test, ks.test, chisq.test, cor.test, linear regression, Installation of packages.

Skill Enhancement Course II
Project Work

The main objective of this course is to acquaint students with the following concepts.

- ➢ To prepare the report of the project
- ➢ To apply different methods of collection of data if any
- ➢ To analyze the data using statistical tools
- ➢ To make the presentation of the project work

The students are supposed to carry out project work during this semester. This project work should be done in a group of not more than 5 students. The project will be evaluated on the following parameters:

Sr. No.	Distribution of work	Marks
1	Initial presentation of the problem	10
2	Data collection/ Methods to be used / layout of project	10
3	Submission of the project & final presentation in scheduled time	20
4	Attendance & active participation for project work	10

Note: Viva would be conducted individually. Viva will be taken for 15 minutes for each candidate.
