One page Report on Organic farming and it's importance

Dr. A.R. Kasarkar welcomed all the dignitaries, staff and students for the enlightening session on Organic Farming and its importance.

Prof. S. P. Salokhe president and head of botany department overviewed the importance of Organic farming and explained it as an agricultural process that uses biological fertilisers and pest control acquired from animal or plant waste. It was initiated as an answer to the environmental sufferings caused by the use of chemical pesticides and synthetic fertilisers. In other words, organic farming is a new system of farming or agriculture that repairs, maintains, and improves the ecological balance.

Dr. J. B. Patil, chief guest highlighted the importance of organic farming cannot be overstated. Excessive use of chemical fertilisers reduces the fertility of soil. Excessive use of chemicals has led to soil, water, and air pollution. he further stated organic farming promotes biodiversity, protects ecosystems, and upholds the health and well-being of both customers and farmers. he then said organic farming is environment-friendly, promotes sustainable development, provides healthy and tasty food, and is an inexpensive process. He then emphasised the Challenges and Future Prospects of organic farming despite its numerous benefits it faces several challenges. The major issue of organic farming is the lack of inadequate infrastructure and marketing of the product. The products obtained through organic farming are less in the initial years as compared to that in chemical products. Organic products have more flaws and a shorter shelf life than that of chemical products. However, with the increasing demand for organic products due to safety of food, the future of organic farming looks promising.

Miss. Mayuri S. Gaikwad expressed gratitude with vote of thanks to our esteemed speakers for their insightful presentations. She also thank all the attendees for their active participation.
