Quality Initiatives/ Activities Report

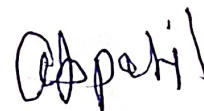

1. **Name of Department:** Chemistry
2. **Name of Organized Activity:** Guest lecture on Soil Analysis
3. **Date Duration:** Wednesday, 20-02-2019
4. **Aims and Objectives:**
 - To understand the objective of soil sampling is to obtain reliable information about a particular soil. The value of laboratory data in soil studies largely depends on effective sampling.
 - Soil sampling is one of the most important aspects in the determination of the properties of the soil.
 - Care in preparation and analysis can overcome the damages of careless or inappropriate sampling in the field. Errors arising from sampling are mainly related to spatial variability of the soil.
 - Students should know, while keeping in mind financial constraints, sampling procedures should be adopted properly to minimize the influence of spatial variability and to maximize the accuracy of mean plot values for the measured soil variables.
 - The obtained soil data should be representative for the whole observation plot, taking into consideration the spatial variability of the soil within the plot.
5. **No. of beneficiaries:**
 - No participants = 110
 -
6. **Expenditure & funding agency:** Vivekanand College, Kolhapur
7. **Brief Description:** The department of chemistry organized ‘Guest lecture on Soil analysis’ for undergraduate & postgraduate students. The chief guest Mr. M.V. Latkar (Director of District Soil and Water Analysis Laboratory). Latkar sir motivated the students; give brief information about evaluation of fertility status of soil, estimation of the available nutrients status of soil, evaluation of the suitability of soil for laying garden, determination of acidity, salinity and alkalinity problems and recommendation of the required amount of fertilizers, lime or gypsum based on soil test value. Dr. D. B. Patil (head of the department of chemistry) also expressed views in terms of soil analysis. The vote of thanks was proposed by Mr. Akshay Gurav.

8. **Outcomes:**

The students benefited from this lecture & understand that Soil analysis is a valuable, farm practice that determines the exact amount of available crop nutrients in the soil. It also provides a visible snapshot of various chemical, physical, and biological soil properties
