Shri Swami Vivekanand Shikshan Sanstha's VIVEKANAND COLLEGE (Autonomous), KOLHAPUR

Class _____ Div _____ Roll No. 7977

Suppliment No. _____ Subject Obj oriented Software Engineering

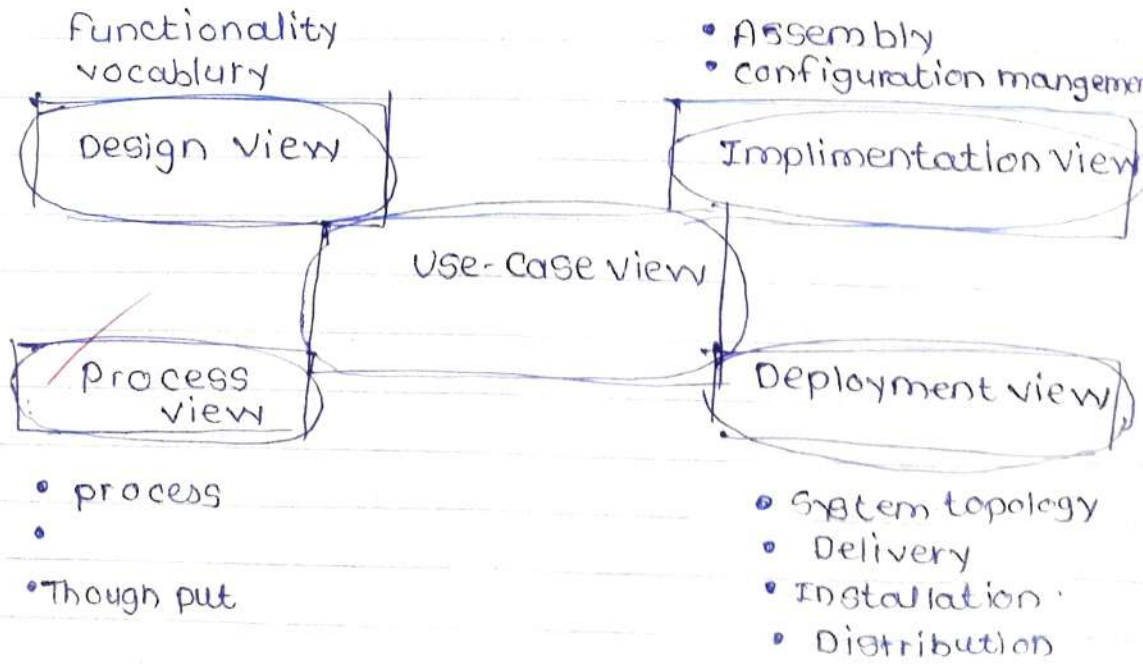

Test / Tutorial No. _____

↑ Explain in detail UML Architecture

→ Q.3 UML Architecture: In real world system is used by diff. users. it may be developer, tester, soft. E, business people & many more. the software architecture when designed system he will made with diff prope-ative in her mind. which is easy to understand diff users. The most system is visulize by diff view.

The soft architecture will help to achive quality in system to designed with software qualities like separation & concern. easy to adap the system become ~~many~~ easy to maintain, reuse & adapt. the system is used by project manager, client & end users. they have their own views, & building agendas. it is ~~easy~~ by follow 5 views

UML Architecture:

- (1) Use-case view: (1) It is the view that shows functionality of system that perceived from the external users (2) It relives the system requirement (3) It capture static ^{UML} ~~view~~ of these view for state-chart diag, activity diag, use-case dia.
- (2) Design view: (1) It is the view that shows the how functionality is made in the system. (2) vocabulary accessed the problem space & soln space.
- (3) Implementation view: (1) It the view that organized core component & files
- (4) Process view: (1) It demonstrate the concurrency of the system it concurrent threads & process may synchronized mechanism.
- (5) Deployment view: (1) It demonstrate the view that demonstrate the deployment with physical architecture. (2) it include the node of software topology & execute the system.

Q.4 Explain in detail conceptual Model of UML

→ conceptual of UML: conceptual model is concept of several interrelated components it is easy to understand & it related to each other. this is the 1st step before drawing the UML.

following object are the objects of the UML which needed in.

(1) object: A object is a real world entity it may ^{one or} more present in single system.

(2) class: class is a software blueprint for

an object which is used to define variables & methods common to all system.

(3) Abstraction: It is essential characteristics of ^{users} system that hiding irrelevant information.

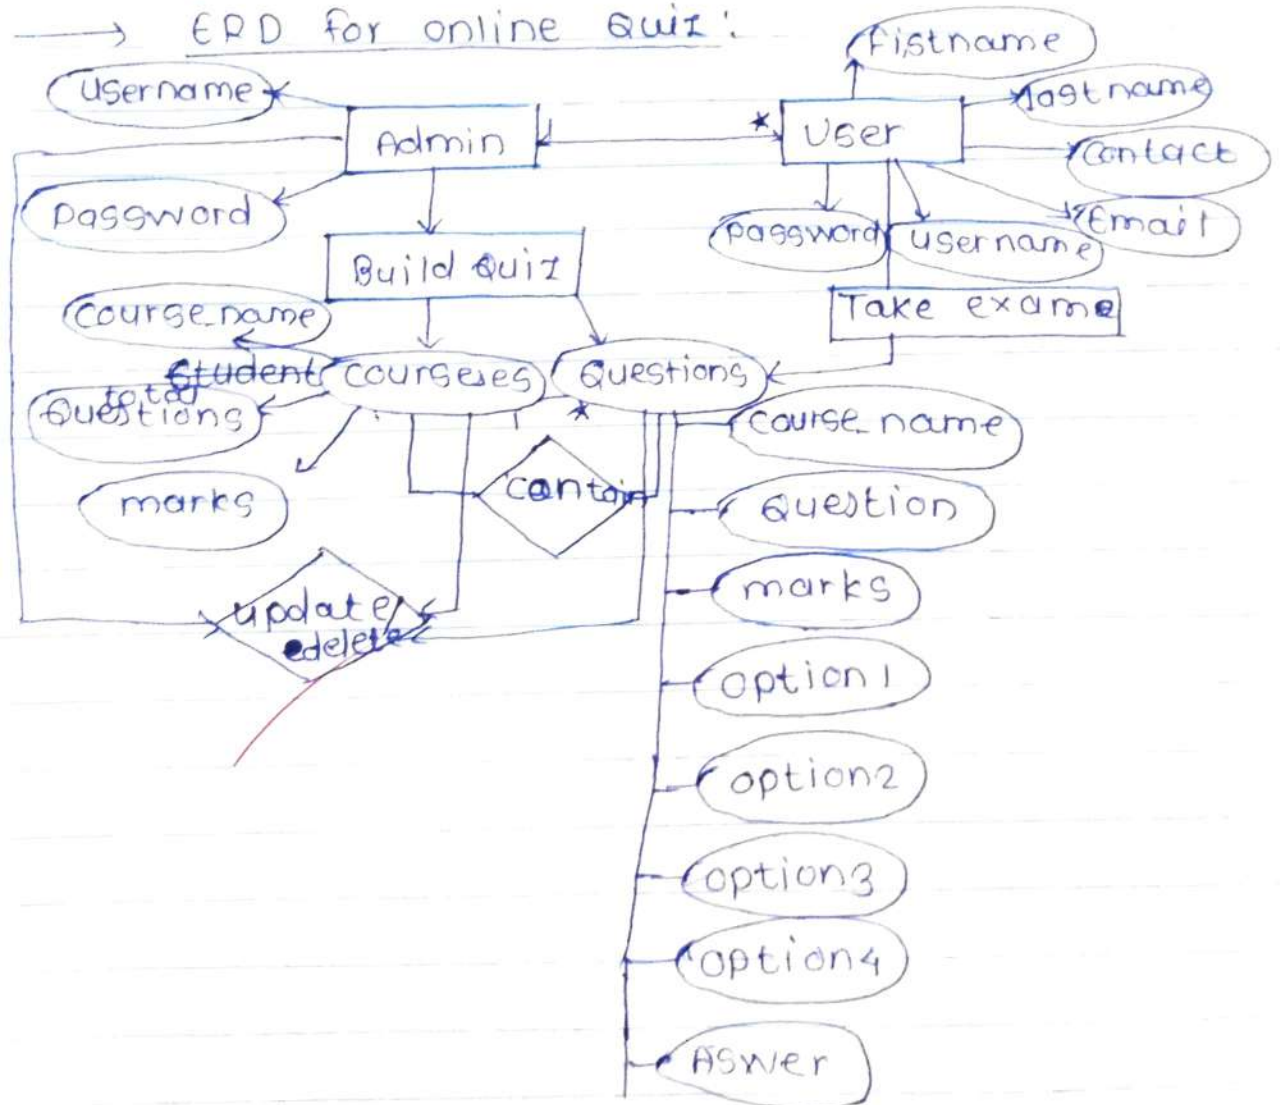

(4) Inheritance: It derived new class from the existing class.

(5) Polymorphism: It is the mechanism which how diff forms for diff purpose.

(6) Encapsulation: It bind data & objects together for using enabling tight coupling between them.

Q.1 Draw DFD & ERD for your system.

→ ERD for online quiz:

Q. 6 Explain class, object & Inheritance in detail

→ (1) object: object is a real world entity which have diff. methods. the obj have more in a single system. it is instiated by class. thus it is instance of class.

(2) Inheritance: Inheritance is a ext: derived a new class by existing class. the existing class called as superclass, base class or parent class, or and new class is also called as child class or innerclass or subclass

In child class include attributes of the existing class it may also have include there own attributes.

for e.g. mammal is a class of human object it have many

cow is mammal

in this ~~the~~ eg. cow is sub class.

Department of Computer Science
CS-Internal Examination
Class : B.Sc. I Subject : Computer Science

Date : 05/03/2021

Time: 1Hrs

Solve any 10:

1. In which language is Python written?

- a) English b) PHP c) All of the above

2. Which one of the following is the correct extension of the Python file?

- a) .py b) .python c) .p d) None of these

3. What do we use to define a block of code in Python language?

- a) Key b) Brackets c) Indentation d) None of these

4. Which of the following functions is a built-in function in python language?

- a) val() b) print() c) input() d) None of these

5. Which of the following is an invalid variable?

- a) mystring 1 b) 1st_string c) foo d) peri

6. Which one of these is modulus operator?

- a) / b) // c) % d) None of the mentioned

7. What is the answer to this expression, $22 \% 3$ is?

- a) 7 b) 1 c) 0 d) 5

8. What will be the value of the following Python expression? $4 + 3 \% 5$

- a) 4 b) 7 c) 2 d) 0

9. What is the output of

- ```
>>> x=15
>>> print(x)
```
- a) 20     b) 15     c) 40     d) 10

10. What is the output of

- ```
>>> x=5
>>> y=67
>>> print(y/xy, " ", y%x)
```
- a) 13.2 b) 13,1 c) 132 d) 13 1

✓ 11. _____ statement is used in python to take input from user.

- a) print() ✓ b) input() c) printf() d) inutn()

✓ 12. _____ is a python prompt.

- a. <<< ✓ b. >>> c. ><> d. /

✗ 13. _____ is used as a translator in python

- a) compiler b) intepreter c) translator d) converter

✓ 14. PYTHON is a _____

- ✓ a) software b) hardware c) operating system d) natural language

✓ 15. Every if ststatement should be followed by

- ✓ a) : b) ; c) " d) ' _*_*_*_*_

Instructions:

1. Attempt all Questions
2. Each question carries 1 mark

- 1) A _____ means "an organized relationship among functioning units or components".
a) Software b) System c) Application d) Function
- 2) _____ characteristics of a system refer to the manner in which each component functions with other components of the system.
a) Interdependence b) Integration
c) Interaction d) Organization
- 3) _____ is a document that captures complete description about how the system is expected to perform.
a) SDS b) SRS c) SMS d) None of these
- 4) In Waterfall Model _____ phase checks that the software is running efficiently and with minimum errors.
a) Design b) Coding c) Maintenance d) Testing
- 5) The practical extent to which a project can be performed successfully is termed as _____.
a) FFT b) ERD c) Feasibility d) None of these
- 6) Accurate information can be collected with help of specific methods to get correct information is termed as _____.
a) System Design b) System Testing c) Feedback d) Fact Finding
- 7) For object-oriented software _____ object modelling language is used.
a) Unifield Modeling Language b) Union Modeling Language
c) Unified Modeling Language d) Undefined Modeling Language
- 8) _____ is the process of extracting, structuring and organizing knowledge from one source, usually human experts.
a) Knowledge Development b) Knowledge gain
c) Knowledge acquisition d) None of these

9) The reasoning and justification behind human decisions, opinions and beliefs is considered in _____

- a) Rationale b) Software Design c) SDLC d) None of these

10) The coding (internal logic) of the software is checked in _____ testing

- a) Black Box testing b) White box testing
c) Alpha Testing d) All of these

Department of Computer Science

B.Sc. III (Sem V) Internal Examination March-2021

Subject: Software Engineering

Duration: 30mins

Date: 19/03/2021

Instructions:

1. Attempt all Questions
2. Each question carries 1 mark

1) A _____ means "an organized relationship among functioning units or components".
 a) Software b) System c) Application d) Function

2) _____ characteristics of a system refer to the manner in which each component functions with other components of the system.
 a) Interdependence b) Integration
c) Interaction d) Organization

3) _____ is a document that captures complete description about how the system is expected to perform.
a) SDS ~~b) SRS~~ c) SMS d) None of these

4) In Waterfall Model _____ phase checks that the software is running efficiently and with minimum errors.
 a) Design b) Coding c) Maintenance d) Testing

5) The practical extent to which a project can be performed successfully is termed as _____.
a) FFT b) ERD c) Feasibility d) None of these

6) Accurate information can be collected with help of specific methods to get correct information is termed as _____.
 a) System Design b) System Testing c) Feedback d) Fact Finding

7) For object-oriented software _____ object modelling language is used.
 a) Unifield Modeling Language b) Union Modeling Language
c) Unified Modeling Language d) Undefined Modeling Language

8) _____ is the process of extracting, structuring and organizing knowledge from one source, usually human experts.
 a) Knowledge Development b) Knowledge gain
c) Knowledge acquisition d) None of these

9) The reasoning and justification behind human decisions, opinions and beliefs is considered in _____.

- a) Rationale b) Software Design c) SDLC d) None of these

10) The coding (internal logic) of the software is checked in _____ testing.

- a) Black Box testing b) White box testing
c) Alpha Testing d) All of these

2. Each question carries 1 mark

- Roll No. 8241
7/10
- 1) In OSI model, when data is sent from device A to device B, the 5th layer to receive data at B is _____
a) Application layer b) Transport layer c) Link layer d) Session layer
 - 2) Bluetooth is an example of _____
 a) personal area network b) local area network
c) virtual private network d) wide area network
 - 3) When collection of various computers seems a single coherent system to its client, then it is called _____.
 a) computer network b) distributed system
c) networking system d) mail system
 - 4) How many layers are present in the Internet protocol stack (TCP/IP model)?
 a) 5 b) 7 c) 6 d) 10
 - 5) Which of the following networks extends a private network across public networks?
 a) local area network b) virtual private network
c) enterprise private network d) storage area network
 - 6) Which of the following are transport layer protocols used in networking?
 a) TCP and FTP b) UDP and HTTP
 c) TCP and UDP d) HTTP and FTP
 - 7) Transport layer is implemented in _____.
a) End system b) NIC c) Ethernet d) Signal transmission
 - 8) A _____ is a device that forwards packets between networks by processing the routing information included in the packet.
a) bridge b) firewall c) router d) hub
 - 9) The number of layers in ISO OSI reference model is _____.
a) 5 b) 7 c) 6 d) 10
 - 10) _____ topology requires a multipoint connection.
a) Star b) Mesh c) Ring d) Bus

Internal Examination 2021

Subject: Java Programming

Class: T.Y.B.Sc. (Sem-V)

Roll Number:

Time: 30 minutes

Total Marks: 10 *01/10*

Q.1. Select correct alternative and put it into box given.

i) The keyword _____ allows main() to be called without creating any _____

- a) public, instances
- b) void, objects
- c) static, objects
- d) static, classes

c ✓

ii) Which of the following is correct syntax for compiling java program?

- a) java pname 1 2
- b) java pname.java
- c) javac pname.java 1 2
- d) javac pname.java

d ✓

iii) Which of the following is valid header for main() method?

- i. public static void main(String a[])
- ii. public static void main(String[] a)
- iii. static public void main(String a[])
- iv. static public void main(String a[])

- a) only i
- b) only i, ii
- c) i, ii, iii
- d) i, ii, iii, iv

b ✓

iv) Select the odd pair of data types from the following:

byte, short, int, long, float, double

- a) byte, short
- b) int, long
- c) float, double
- d) int, float

EC ✓

v) Name the operators: <, &, ||, * =

- a. Conditional, Bitwise, Relational, Assignment
- b. Relational, Logical, Bitwise, Compound Assignment
- c. Relational, Bitwise, Logical, Compound Assignment
- d. Relational, Bitwise, Bitwise, Assignment

C ✓

vi) Which of the following is true for Array in Java?

- i. It is an Object in Java
- ii. It is collection of same type elements
- iii. Array variables may be of non-primitive types
- iv. Element of array is accessed by subscript

- a) only i b) only i, ii c) i, ii, iii d) i, ii, iii, iv

d ✓

vii) What is the output of following Java Statement?

```
System.out.println((4&5)|(4|5));
```

- a) 2 b) 3 c) 4 d) 5

d ✓

viii) What is the output of following Java Statement?

```
System.out.println(!( ! (10<20 && 10<30 || !(5>6))));
```

- a) 0 b) 1 c) true d) false

c ✓

ix) Which is/are of the following not true for 'this' keyword?

- a) It is used create ambiguity between local and instance variable
- b) It is used create constructor within another constructor
- c) Both a and b
- d) None of these

c ✓

x) _____ method exists even when there is no object created, it can be invoked using the _____ name and it belongs to the _____.

- a) Public, object, class
- b) Private, object, object
- c) User defined, object, class
- d) Static, class, class

d ✓

Roll Number: 7335

Time: 30 minutes

Total Marks: 10

Marks obtained: 05

Q.1. Select correct alternative and put it into box given.

i) The following are functions of a DBMS except _____

a) creating and processing forms

b) creating databases

c) processing data

d) administrating database

a

ii) The ability to modify a schema definition in one level without affecting a schema definition in the next higher level is called _____

a) data abstraction

b) data independence

~~c) both a and b~~

d) none of the above

d

iii) USE keyword is used to select a _____.

a) table

b) column

c) database

d) all of the above

c

iv) _____ is not a data type of MySQL.

a) float

b) date

c) double

d) string

d

v) _____ is used as default SQL statement delimiter.

a) ;

b) ,

c) :

d) .

a

vi) Which of the following is/are the component/s of DBMS?

- a) hardware b) software c) data d) All of these

d

vii) _____ language is a simple language designed to communicate with database environment.

- a) Database Access b) Communication
c) both a and b d) None of these

a

viii) Centralized control of database is exerted by a person or group of persons is referred as _____ and a person or group of persons doing such task is known as _____.

- a) Database administration, Database administrator
b) Database Observation, Database Observer
c) Database monitoring, Database monitor
d) None of these

a

ix) Which is/are of the following disadvantages of file system?

- a) Data redundancy
b) Data inconsistency
c) Data isolation
d) All of these

d

x) Which is not true about DBMS from the following?

- a) These are large systems
b) These are single user systems
c) These systems provides better security
d) These systems provides better data access

Algorithm

Assignment No. 1

Q1 What is algorithm? Explain it.

Defination: An algorithm is a finite sequence of well-defined, computer-implementable instructions, typically to solve a class of problems or to perform a computation.

The term finite means that the algorithm reach an end point and cannot run forever.

An algorithm is step by step procedure to solve a given problem.

You can find algorithm everywhere in your life, not just in computer science.

Eg. The process to make a sandwich.

The process to make a cup of tea.

Q2 Write advantages and disadvantages of algorithm.

Advantages of algorithm:

- 1] It is a step wise representation of a solution to given problem, which makes it easy to understand.
- 2] An algorithm uses a definite procedure.
- 3] It is not dependent on any programming language so it is easy understand for anyone even without any programming language.
- 4] Every step in algorithm has its own logical sequence so it is easy to debug.
- 5] By using algorithm, the problem is broken down into smaller pieces or steps hence it is easiar for programmer to convert it into actual programmer.

Disadvantages of algorithm :

- 1] Algorithm is time consuming.
- 2] Difficult to show branching and looping in algorithm.
- 3] Big tasks are difficult to put in Algorithms.

Q3 Write features of algorithm.

The Following are the features of a good algorithm.

- 1] Precision : a good algorithm must have certain outline steps. The steps should be exact enough, and not varying.
- 2] Uniqueness : each step taken the algorithm should give definite result as stated by the writer of the algorithm. The results should not fluctuate by any means.
- 3] Feasibility : The algorithm should be possible and practicable in real life. it should not be abstract or imaginary.
- 4] Input : a good algorithm must be able to accept a set of defined input.
- 5] Output : a good algorithm should have be able to produce results as output, preferably solutions.
- 6] Finiteness : the algorithm should have a stop after a certain number of instructions.

Assignment No. 2

Q1] What is constant? Give five examples.

Defination : Data values that stay the same every time a program is executed are known as constants. constants are not expected to change.

Ex. 10, 20, 30, 40, 50 etc.

Q2] What is variable? Give two examples.

Defination : Variables are data values that can change. When the user is asked a question, variables may change during program execution.

ex.

i) 'Marks' would need to be variable to change through-out a year.

ii) 'Age' would need to be variable as change day by day.

Q3] Write an algorithm to print multiplication of 4 Nos. 5, 10, 20, 30

Algorithm to print multiplication of 4 nos. 5, 10, 20, 30 :

Step 1 : Start

Step 2 : no1 = 10

Step 3 : no2 = 5

Step 4 : no3 = 15

Step 5 : no4 = 20

Step 6 : no5 = 30

Step 7 : ans = no1 * no2 * no3 * no4 * no5

Step 8 : print ans

Step 9 : End.

Q4 Write an algorithm to print multiplication of 3 nos. inputted by user.

Algorithm to print multiplication of 3 nos. inputted by user.

Step 1 : Start

Step 2 : Input no 1, no 2, no 3

Step 3 : $ans = no\ 1 * no\ 2 * no\ 3$

Step 4 : print ans

Step 5 : End.

If Input 10, 20, 30

Output 6000

If Input 3, 2, 5

Output 30

Assignment No. 3

classmate

Date _____

Page _____

Q.1 Write an algorithm to find area and perimeter of rectangle. Length and breadth should be entered by user.
Algorithm to find area of rectangle, length and breadth entered by user :

Step 1 : Start

Step 2 : Input length

Step 3 : Input breadth

Step 4 : $\text{area} = \text{length} * \text{breadth}$

Step 5 : $\text{perimeter} = 2 * (\text{length} + \text{breadth})$

Step 6 : print area.

Step 7 : print perimeter

Step 8 : End

IF Input : 4 5

output : 20 18

Input : 6 8

output : 48 28

Q.2 Write an algorithm to find area and perimeter of square.
Algorithm to find area and perimeter of square.

Step 1 : Start

Step 2 : Input Side

Step 3 : $\text{area} = \text{Side} * \text{Side}$

Step 4 : $\text{perimeter} = 4 * \text{Side}$.

Step 5 : print area.

Step 6 : print perimeter

Q 1 Write an algorithm to enter any number and check whether the number is greater than 10 or not. (eg Input 2 output "No is not greater than 10")
An algorithm to check whether the number is greater than 10 or not.

Step 1: Start

Step 2: Input number

Step 3: if number ≥ 10

Yes goto 4

No goto 6

Step 4: print "No. is greater than or equal to 10"

Step 5: goto end

Step 6: print "No is less than 10"

Step 7: End

Input - 12

output - 12 is greater than 10.

Input - 4

output - 4 is less than 10.

Q 2 Write an algorithm to enter a year in numeric form and check the inputted year is leap year or not (eg Input 2000 output "leap year")
An algorithm to check the inputted year is leap year or not.

Step 1: Start

Step 2: Input year

Step 3: IF $\text{year} \% 4 == 0$

Yes goto 4

No goto 6

Step 4: print ("leap year")

Step 5: goto end

Step 6: print ("year is not leap")

Step 7: End

Input - 2021

output - year is not leap

Input - 2012

output - leap year.

Assignment No 5

Q 1 Write an algorithm to print Numbers from 1 to 80.

Step 1 : Start

Step 2 : no = 1

Step 3 : Test if no \leq 80

Yes goto 4

No goto 7

Step 4 : print no

Step 5 : no = no + 1

Step 6 : goto 3

Step 7 : End.

output

1 2 3 4 5 6 7 80.

Q 2 Write an algorithm to print Numbers from 50 to 25 in descending order.

Step 1 : Start

Step 2 : no = 50

Step 3 : Test if no \geq 25

Yes goto 4

No goto 7

Step 4 : print no

Step 5 : no = no - 1

Step 6 : goto 3

Step 7 : End

output

50 49 48 47 46 45 25

Q3 Write an algorithm to print all even numbers from 10 to 50

Method I :

Step 1 : Start

Step 2 : no = 10

Step 3 : Test if no \leq 50

Yes goto 4

No goto 7

Step 4 : print no

Step 5 : no = no + 2

Step 6 : goto 3

Step 7 : End

output

10, 12, ~~14~~, 16, 18, 50

Method II

Step 1 : Start

Step 2 : no = 10

Step 3 : Test if no \leq 50

Yes goto 4

No goto 8

Step 4 : Test if no % 2 == 0

Yes goto 5

No goto 6

Step 5 : print no

Step 6 : no = no + 1

Step 7 : goto 3

Step 8 : End

output

10 12 14 16 50

Assignment no. 6

Q1 Print your full name using print statement.

```
>>> fname = "Sayali"
```

```
>>> mname = "Shrikant"
```

```
>>> lname = "Powar"
```

```
>>> print (fname, mname, lname)
```

```
Sayali Shrikant Powar.
```

Q2 Store your name to variable name store address to variable address, birth date to variable bdate and display it with print statement.

```
>>> name = "Sayali Shrikant Powar"
```

```
>>> address = "AP Akiwat, ta. shirol, dist. kolhapur"
```

```
>>> bdate = "3rd april 2002"
```

```
>>> print ("Name=", name,  
          "\naddress=", address,  
          "\nbdate=", bdate)
```

```
Name = Sayali Shrikant Powar
```

```
address = AP Akiwat, ta. shirol, dist. kolhapur
```

```
bdate = 3rd april 2002.
```

Assignment No. 7

Q1 Write python script to enter 4 sides of quadrilateral and find out perimeter.

```
>>> S1 = input("enter first side")
enter first side 8
>>> S2 = input("enter second side")
enter second side 4
>>> S3 = input("enter third side")
enter third side 10
>>> S4 = input("enter fourth side")
enter fourth side 6
>>> peri = S1 + S2 + S3 + S4
>>> print("Perimeter of quadrilateral=", peri)
Perimeter of quadrilateral= 28
```

Q2 Write a script to enter item no, name, quantity and rate. Calculate net price.

```
>>> item_no = input("enter item no=")
enter item no= 2
>>> name = raw_input("enter name of item")
enter name of item pencil
>>> quantity = input("enter quantity of item=")
enter quantity of item= 15
>>> rate = input("enter rate of item=")
enter rate of item= 5
>>> net_price = quantity * rate
>>> print("net price=", net_price)
net price= 75
```

3] Write a script to enter four numbers. Find out sum of 1st two numbers, store it to sum1. Find sum of last two numbers, store it to sum2. Find difference between sum1 and sum2.

```
>>> no1 = input("enter 1st no")
```

enter 1st no 30

```
>>> no2 = input("enter 2nd no")
```

enter 2nd no 25

```
>>> no3 = input("enter 3rd no")
```

enter 3rd no 40

```
>>> no4 = input("enter 4th no")
```

enter 4th no 50

```
>>> Sum1 = no1 + no2
```

```
>>> Sum2 = no3 + no4
```

```
>>> d = Sum2 - Sum1
```

```
>>> print("difference between", sum1, "and", sum2, "is", d)
```

difference between 55 and 90 is 35

Assignment No 8

Q1 Input any number and check whether number is greater than 100 or not.

```
>>> no = int(input("enter any no"))
enter any no 102
>>> if (no >= 100):
        print(no, "is greater than 100")
elif (no < 100):
        print(no, "is less than 100")
else:
        print(no, "is equal to 100")
```

102 is greater than 100.

Q2 Input marks in 3 Subjects calculate total and percentage and display grade as follows.

```
>>> m1 = int(input("marks in 1st subject="))
marks in 1st subject = 96
>>> m2 = int(input("marks in 2nd subject="))
marks in 2nd subject = 88
>>> m3 = int(input("marks in 3rd subject="))
marks in 3rd subject = 92
>>> t = m1 + m2 + m3
>>> per = t / 3
>>> print("percentage =", Per)
percentage = 92.0
```

```
>>> if(per > 40):  
    print("Grade = pass")  
else:  
    print("Grade = fail")
```

```
Grade = pass
```

Q3 Input number of books and find out discount as follows:

```
if books > 20 Discount = 100 else Discount = 50.
```

```
>>> books = int(input("enter no of books"))
```

```
enter no of books 45
```

```
>>> if (books > 20):
```

```
    print("Discount = 100")
```

```
else:
```

```
    print("Discount = 50")
```

```
Discount = 100
```

Assignment No. 1

1. What is algorithm? Explain it.

→ An algorithm is a finite sequence of well defined, computer-implementable instructions typically to solve a class of problems or to perform a computation.

An algorithm is a step by step procedure to solve a given problem.

The term finite means that the algorithm should reach an end point and cannot run forever.

You can find algorithms everywhere in your life, not just in computer science.

2. What are the advantages and disadvantages of an algorithm?

→ Advantages of an algorithm are:

1) An algorithm is a stepwise representation of a solution to a given problem.

2) It is easy to understand.

3) An algorithm uses a definite procedure.

4) Every step in an algorithm has its own logical sequence, so it is easy to debug.

5) By using an algorithm, the problem is broken down into smaller pieces or steps, hence it is easy.

for programmer to convert it into actual programmer

* disadvantages of algorithms :-

1) Algorithm is time consuming

2) Big tasks are difficult to put in Algorithm

3) Difficult to show branching and looping in algorithm

3. Write features of algorithm.

→ The features of algorithm They are as following:-

1) Precision - a good algorithm must have a certain outlined steps. The step should be exact enough and not varying.

2) uniqueness - each step taken in the algorithm should give a definite result as stated by the writer of the algorithm. the results should not fluctuate by any means.

3) feasibility - the algorithm should be possible & practicable in real life. It should not be abstract or imaginary.

4) Input - a good algorithm must be able to accept a set of defined input.

Assignment No-2

Q 1. What is a constant? Give five example.

→ Data values that stay the same every time a programme is executed are known as Constant.

E.g- 1) Algorithm to add 2 nos 100 & 200.

Step 1 : Start

Step 2 : X = 100

Step 3 : Y = 200

Step 4 : Z = X + Y

Step 5 : Print Z

2)

Algorithm to add 2 nos 50 & 100.

Step 1 : Start

Step 2 : X = 50

Step 3 : Y = 100

Step 4 : Z = X + Y

Step 5 : Print Z

3) Algorithm to add 2 inputed values

Step 1 : Start

Step 2 : Input X

Step 3 : Input Y

Step 4 : Z = X + Y

Step 5 : Print

Z

4) Algorithm to add inputed values

$$\boxed{?} + \boxed{?} = \boxed{?}$$

$$\boxed{P} + \boxed{Q} = \boxed{?}$$

Step 1 : Start

Step 2 : input P

Step 3 : input Q

Step 4 : in $R = P + Q$

Step 5 : Print R =

Assignment no. 3.

Q 1. Write an algorithm to find area and perimeter of rectangle, length & breadth should be entered by user.

→

- step 1: start
- step 2: Input length
- step 3: Input breadth
- step 4: $\text{area} = \text{length} \times \text{breadth}$
- step 5: $\text{Perimeter} = 2 \times (\text{length} + \text{breadth})$
- step 6: Print area, Perimeter
- step 7: End.

Q 2. Write an algorithm to find area and perimeter of square

→

- step 1: start
- step 2: Input side
- step 3: $\text{area} = \text{side} \times \text{side}$
- step 4: $\text{Perimeter} = 4 \times \text{side}$
- step 5: Print area & Perimeter
- step 6: End.

Assignment No. 4.

Q1. Write an algorithm to enter any number ~~to~~ and check whether the number is greater than 10 or not.

→

STEP 1 : Start

STEP 2 : Input number n

STEP 3 : If number ≥ 10

YES Goto 4

NO Goto 6

STEP 4 : Print "No is greater than or equal to 10"

STEP 5 : Goto end

STEP 6 : Print No is less than 10

STEP 7 : End

Q2. Write an algorithm to enter a year in numeric form & check the inputted year is leap year or not

→

STEP 1 : Start

STEP 2 : Input year

STEP 3 : If Year $\% 4 = 0$

Yes goto 4

No goto 6

STEP 4 : ^{Print} "year is leap"

STEP 5 : goto end

Assignment No - 5

Q 1. Write an algorithm to print number from 1 to 80

→

step 1: start
step 2: no = 1
step 3: Test if no \leq 80
 yes goto 4
 no goto 7
step 4: Print no = no + 1
step 6: goto 3
step 7: End.

Q 2) Write an algorithm to print number from 50 to 25 in descending order

→

step 1: start
step 2: no = 50
step 3: Test if number \geq 25
 yes goto 4
 no goto 7
step 4: no = no - 1 Print no
step 5: goto 3 no = no - 1
step 6: goto 3
step 7: End

Python assignment No - 1

Q 1) Print your full name using print statement
→

~~start~~

```
>>> fname = ("shubham")
>>> mname = "shashikant"
>>> lname = "kore"
>>> print (fname, mname, lname)
shubham shashikant kore.
```

Q 2) store your name to variable name, store address to variable address, birth date to variable bdate, & display it with print statement.
→

~~start~~

```
>>> name = "shubham" kore
>>> address = "A.P kaskibya sangoon, tal-kay
dist kolhapur"
>>> bdate = 11th July 2002
>>> print (name, address, bdate)
```

Page

Python assignment No - 1

Q 1) Print your full name using print statement

→

~~Q 1)~~ ~~Print your full name using print statement~~

```
>>> fname = "shubham"
>>> mname = "shashikant"
>>> lname = "kore"
>>> print (fname, mname, lname)
shubham shashikant kore.
```

Q 2) store your name to variable name, store address to variable address, birth date to variable bdate, & display it with print statement.

→

~~Q 2)~~ ~~store your name to variable name, store address to variable address, birth date to variable bdate, & display it with print statement.~~

```
>>> name = "shubham" kore"
>>> address = "A.P kasabga sanghon, tal-kay
dist kolhapur"
>>> bdate = 11th July 2002

Python - assignment - 2.

Q 1. Write Python script to enter 4 sides of quadrilateral & find out perimeter

→

```
>>> s1 = int(input("Enter 1st side"))  
Enter 1st side 8  
>>> s2 = int(input("Enter 2nd side"))  
Enter 2nd side 4  
>>> s3 = int(input("Enter 3rd side"))  
Enter 3rd side 6  
>>> s4 = int(input("Enter 4th side"))  
Enter 4th side 5  
>>> print("Perimeter of quadrilateral =  
s1 + s2 + s3 + s4")  
Perimeter of quadrilateral = 23
```

Q 2. Write script to enter item_no, name, qty & Rate, calculate net price.

→

```
>>> I = int(input("input item no"))  
>>> I = int(input("Enter item no"))  
Enter item no 7  
>>> N = int(input("Enter name of item"))  
Enter name of item bulb  
>>> q = int(input("Enter quantity"))  
Enter quantity 10  
>>> R = int(input("Enter Rate"))  
Enter Rate 30
```

Date _____
Page _____

Python assignment 3.

1. Input any number and check whether number is greater than 100 or not

→

```
>>> x = int(input("Enter number"))  
Enter number 98  
>>> if (x > 100):  
    print(x, "is greater than 100")  
elif (x < 100):  
    print(x, "is not greater than 100")  
elif  
    print(x, "is 100")
```

98 is not greater than 100

2. Input marks in 3 subject. Calculate total and Percentage & display grades as follows
if $Per < 40$ Grade = "FAIL" else Grade = "PASS"

→

```
>>> M1 = int(input("Enter marks in 1st subject"))  
Enter marks in 1st subject 40  
>>> M2 = int(input("Enter marks in 2nd subject"))  
Enter marks in 2nd subject 70
```

Assignment 1

Q.1 What is algorithm? Explain it.

⇒ An algorithm is a finite sequence of well-defined, computer-implementable instructions, typically to solve a class of problems or to perform a computation.

The term finite means that the algorithm should reach an end point and cannot run forever.

An algorithm is a step by step procedure to solve a given problem

eg., The process to make a sandwich.

Q.2 Write advantage and disadvantage of algorithm.

⇒ Advantage of algorithm -

1. It is step wise representation of a solution to given problem., which makes it easy to understand.
2. An algorithm uses a definite procedure
3. It is not dependent on any programming language so it is easy to understand for anyone even without any programming language.
4. Every step in algorithm has its own logical sequence so it is easy to debug.
5. By using algorithm, the problem is broken down into smaller pieces or steps hence, it is easier for programmer to convert it into actual programmer.

Disadvantages of algorithm -

1. Algorithm is time consuming.
2. Difficult to show branching and looping in algorithm.
3. Big tasks are difficult to put in algorithms.

Q.3 Write features of algorithm

⇒ The following are the features of a good algorithm.

- 1) Precision - a good algorithm must have a certain outlined steps. The steps should be exact enough & not varying.
- 2) Uniqueness - each step taken in the algorithm should give a definite result as stated by the writer of the algorithm. The result should not fluctuate by any means.
- 3) Feasibility - the algorithm should be possible & practicable in real life. It should not be abstract or imaginary.
- 4) Input - a good algorithm must be able to accept a set of defined input.
- 5) Output - a good algorithm should be able to produce result as output, preferably solutions.
- 6) Finiteness - the algorithm should have a stop after a certain number of instructions.
- 7) Generality - the algorithm must apply to a set of defined inputs.

Q.4 Write an algorithm to make a pizza.

⇒ algorithm to make a pizza -

step 1 - start

step 2 - Take the dough out & roll it into a circle.

step 3 - Puff out the edge of the dough so the crust is thicker at the edge.

step 4 - Pre-heat oven to 250-260 °C

step 5 - Put on the pizza sauce cheese, & toppings

step 6 - Put the pizza on the pizza stone in the oven.

step 7 - Bake for 30 minutes or until pizza is crispy & golden brown.

step 8 - Eat it!

step 9 - End.

Assignment-2

Q.1. What is constant? Give five examples.

⇒ Data values that stay the same every time a program is executed are known as constant. Constants are not expected to change.

In computer programming, a constant is a value that cannot be altered by the program during normal execution.

eg., 1. The data value "hello world" has been fixed into the code.

2. The unit of gravity

3. The value of π

4. The amount of time allowed for a level in a game.

5. Suppose addition of two no.s i.e addition of 20 & 40 in this the no.s 20 & 40 are the constant.

Q.2 What is variable? Give two examples.

⇒ Variables are data values that can change when the user is asked a question, Variable may change during program execution.

A variable is a memory location. It has a name that is associated with that location. The memory location is used to hold data

eg., 1. The 'age'

2. 'marks' would need to be variable to change throughout a year.

3. The salary goes on changing

Q.3 Write an algorithm to print multiplication of 4 nos. 5, 10, 20, 30

- ⇒
- Step 1 - Start
 - Step 2 - no₁ = 5
 - Step 3 - no₂ = 10
 - Step 4 - no₃ = 20
 - Step 5 - no₄ = 30
 - Step 6 - ans = $5 * 10 * 20 * 30$
 - Step 7 - Print ans
 - Step 8 - End

Output - 30,000

Q.4 Write an algorithm to print multiplication of 3 nos. inputted by user.

⇒ Algorithm to print multiplication of 3 nos. inputted by user.

- Step 1 - Start
- Step 2 - Input no₁, no₂, no₃
- Step 3 - ans = $no_1 * no_2 * no_3$
- Step 4 - Print ans
- Step 5 - End

If input 5, 15, 20
output is 1500

If input is 27, 18, 9
output is 4374

Assignment-3

Q.1 Write an algorithm to find area & perimeter of rectangle. Length & breadth should be entered by user.

⇒ Algorithm to calculate area & perimeter of rectangle inputed by user.

step 1 - start

step 2 - input length, breadth

step 3 - $\text{area} = \text{length} * \text{breadth}$

step 4 - $\text{perimeter} = 2(\text{length} + \text{breadth})$

step 5 - Print area, perimeter

step 6 - End.

If input is $l = 38$, $b = 12$

then output $\text{area} = 456$ & $\text{perimeter} = 100$

If input is $l = 23$, $b = 11$

then output $\text{area} = 253$ & $\text{perimeter} = 68$

Q.2 Write an algorithm to find area and perimeter of square.

⇒ Algorithm to find area and perimeter of square.

step 1 - start

step 2 - Input side

step 3 - $\text{Area} = \text{side} * \text{side}$

step 4 - $\text{Perimeter} = 4 * \text{side}$

step 5 - Print area, perimeter

step 6 - End.

Assignment 4

Q.1 Write an algorithm to enter any number and check whether the number is greater than 10 or not (eg Input 2 output "No. is not greater than 10")

⇒ Step 1 : start

Step 2 : input no

Step 3 : if number ≥ 10

yes goto 4

No goto 6

Step 4 : Print "No is greater equal to 10"

Step 5 : goto end

Step 6 : Print "No is smaller than 10"

Step 7 : end

input no = 12

output - 12 is greater than 10.

Q.2 Write an algorithm to enter a year in numeric form & check the inputted year is leap year or not.

⇒ Step 1 : Start

Step 2 : Input year

Step 3 : If year $\% 4 = 0$

yes goto 4

no goto 6

Step 4 : Print "leap year"

Step 5 : Goto end

Step 6 : Print "year is not leap"

Step 7 : end.

Input : 2021

Output : year is not leap.

Assignment - 5

Q1 Write an algorithm to print number from 1 to 80

⇒ step 1 : start
step 2 : no = 1
step 3 : test if no < 80
 yes goto 4
 no goto 7

Step 4 : Print no

Step 5 : no = no + 1

step 6 : goto 3

step 7 : end

Input : 1, 2, 3, ..., 80.

Q2 Write an algorithm to print no. from 50 to 25 in decreasing order.

⇒ step 1 : start
step 2 : no = 50
step 3 : test if no \geq 25
 yes goto 4
 no goto 7

step 4 : print no

step 5 : no = no - 1

step 6 : goto 3

step 7 : end

output : 50, 49, 48, ..., 25.

Assignment - 6

Q-1 Print your full name using print statement.

```
⇒ >>> fname = "Gayatri"  
>>> mname = "Ananda"  
>>> lname = "Patil"  
>>> Print (fname, mname, lname)  
Gayatri Ananda Patil
```

Q-2. Store your name to variable name store address birthdate to variable bdate & display it with print statement

```
⇒ >>> name = "Gayatri Patil"  
>>> address = "Bapuram Nagar Kalamba Road, Kolhapur"  
>>> bdate = "27-6-2002"  
>>> print ("Name :-", name,  
           "\n Address :-", address,  
           "\n Birthdate :-", bdate)
```

Output

Name :- Gayatri Patil.

Address:- Bapuram Nagar Kalamba Road, Kolhapur.

Birthdate:- 27-6-2002

Assignment - 7

Q.1 Write Python script to enter 4 sides of quadrilateral & find out perimeter.

```
⇒ >>> s1 = int(input("enter 1st side"))  
enter 1st side 8  
>>> s2 = int(input("enter 2nd side"))  
enter 2nd side 4  
>>> s3 = int(input("enter 3rd side"))  
enter 3rd side 3  
>>> s4 = int(input("enter 4th side"))  
enter 4th side 6  
>>> Print("Perimeter of quadrilateral = ", s1+s2+s3+s4)  
perimeter of quadrilateral = 21
```

Q.2. Write Script to enter item-no, name, qty & rate, Cal net price

```
⇒ >>> I = int(input("enter item-no"))  
enter item no. 2  
>>> N = int(input("enter name of item"))  
enter name of item Notebook  
>>> Q = int(input("enter quantity"))  
enter quantity 4  
>>> R = int(input("enter rate of item"))  
enter rate of item 35  
>>> Print("Net price = ", Q*R)  
Net price = 140
```

Assignment - 8

Q1 Input any no. & check whether no. is greater than 100 or not.

```

=> >>> x = int(input("enter no="))
    enter no = 98
    >>> if (x > 100)
    print(x, "is greater than 100")
    if (x < 100)
    print(x, "is not greater than 100")
    else x = 100
    print(x, "is 100")
  
```

98 is not greater than 100.

Q2. Input marks in 3 subject cal. total & percentage & display grade as follows -

```

=> If per < 40 Grade = "FAIL" else Grade = "Pass"
    >>> M1 = int(input("enter marks in 1st subject"))
    enter marks in 1st subject 80
    >>> M2 = int(input("enter marks in 2nd subject"))
    enter marks in 2nd subject 90
    >>> M3 = int(input("enter marks in 3rd subject"))
    enter marks in 3rd subject 85
    >>> print("Total = ", M1 + M2 + M3)
    Total = 255
    >>> print("percentage = ", (M1 + M2 + M3) / 3)
    percentage = 85 %
    >>> if (percentage < 40)
    print("Grade = FAIL")
    else (percentage >= 40)
    print("Grade = Pass")
  
```

Grade = Pass
